UbiComp 2004: Ubiquitous Computing Feb 07 2021 Welcome to the proceedings of UbiComp 2004. In recent years the ubiquitous computing community has witnessed a sign- cant growth in the number of conferences in the area, each with its own disti- tive characteristics. For UbiComp these characteristics have always included a high-quality technical program and associated demonstrations and posters that cover the full range of research being carried out under the umbrella of ubiq- tous computing. Ours is a broaddiscipline andUbiComp aims to be aninclusive forum that welcomes submissions from researchers with many di?erent ba- grounds. This year we received 145 submissions. Of these we accepted 26, an acceptance rate of just under 18%. Of course acceptance rate is simply a m- sure of selectivity rather than quality and we were particularly pleased this year to note that we had a large number of high-quality submissions from which to assemble the program for 2004. The broad nature of ubiquitous computing research makes reviewing Ubi- Comp submissions a particular challenge. This year we adopted a new process for review and selection that has, we hope, resulted in all authors obtaining - tremely detailed feedback on their submission whether or not it was accepted for publication. We believe the process enabled us to assemble the best pos- ble program for delegates at the conference. If you submitted a paper, we hope that you bene?ted from the feedback that your peers have provided, and if you attended UbiComp 2004 we hope that you enjoyed the technical program.

Cumulative List of Organizations Described in Section 170 (c) of the Internal Revenue Code of 1954 Feb 19 2022
The Psychology of Environmental Problems Oct 15 2021 This textbook demonstrates how eight major approaches in psychology can be applied to create a more sustainable society facing environmental threats. It can be used as text in Ecological Psychology, Environmental Science/Education, and Sustainability Sciences. It is also a valuable resource for policymakers, legislators, and those working on sustainable communities.

Emerging Needs and Opportunities for Human Factors Research Apr 09 2021 This book identifies areas that represent new needs and opportunities for human factors research in the coming decades. It is forward-looking, problem oriented, and selectively focused on national or global problems, including productivity in organizations, education and training, employment and disabilities, health care, and environmental change; technology issues, including communications technology and telenetworking, information access and usability, emerging technologies, automation, and flexible manufacturing, and advanced transportation systems; and human performance, including cognitive performance under stress and aiding intellectual work.

Energy And Material Resources Oct 03 2020 Knowledge of public attitudes and values is essential to the formulation and implementation of government policies affecting energy and other natural resources, but it is difficult to obtain and use this knowledge, for the pertinent issues are complex and involve such difficult-to-define concepts as degree of acceptable risk for both present and future generations. Recently, survey researchers have attempted to measure and explain public attitudes related to energy and resource conservation. This volume examines what policymakers need to or would like to know about these attitudes, what kinds of results the researchers have been able to obtain, and the extent to which their results currently influence the policymaking process.

Designing Social Research Sep 02 2020 The basic requirements for research designs and research proposals are laid out at the beginning of the book, followed by discussion of the major design elements, and the choices that need to be made about them. Four sample research designs at the end of the volume illustrate the application of the research strategies.

Optimality in Biological and Artificial Networks? Dec 05 2020 This book is the third in a series based on conferences sponsored by the Metroplex Institute for Neural Dynamics, an interdisciplinary organization of neural network professionals in academia and industry. The topics selected are of broad interest to both those interested in designing machines to perform intelligent functions and those interested in studying how these functions are actually performed by living organisms and generate discussion of basic and controversial issues in the study of mind. The topic of optimality was chosen because it has provoked considerable discussion and controversy in many different academic fields. There are several aspects to the issue of optimality. First, is it true that actual behavior and cognitive functions of living animals, including humans, can be considered as optimal in some sense? Second, what is the utility function for biological organisms, if any, and can it be described mathematically? Rather than organize the chapters on a "biological versus artificial" basis or by what stance they took on optimality, it seemed more natural to organize them either by what level of questions they posed or by what intelligent functions they dealt with. The book begins with some general frameworks for discussing optimality, or the lack of it, in biological or artificial systems. The next set of chapters deals with some general mathematical and computational theories that help to clarify what the notion of optimality might entail in specific classes of networks. The final section deals with optimality in the context of many different high-level issues, including exploring one's environment, understanding mental illness, linguistic communication, and social organization. The diversity of topics covered in this book is designed to stimulate interdisciplinary thinking and speculation about deep problems in intelligent system organization.

Small Sample Size Solutions May 10 2021 Researchers often have difficulties collecting enough data to test their hypotheses, either because target groups are small or hard to access, or because data collection entails prohibitive costs. Such obstacles may result in data sets that are too small for the complexity of the statistical model needed to answer the research question. This unique book provides guidelines and tools for implementing solutions to issues that arise in small sample research. Each chapter illustrates statistical methods that allow researchers to apply the optimal statistical model for their research question when the sample is too small. This essential book will enable social and behavioral science researchers to test their hypotheses even when the statistical model required for answering their research question is too complex for the sample sizes they can collect. The statistical models in the book range from the estimation of a population mean to models with latent variables and nested observations, and solutions include both classical and Bayesian methods. All proposed solutions are described in steps researchers can implement with their own data and are accompanied with annotated syntax in R. The methods described in this book will be useful for researchers across the social and behavioral sciences, ranging from medical sciences and epidemiology to psychology, marketing, and economics.

Official Gazette of the United States Patent and Trademark Office Sep 26 2022

Problems and Solutions in Human Assessment Jan 06 2021 The assessment of individual differences has generated shockwaves affecting sociology, education, and a number of other behavioral sciences as well as the fields of management and organizational behavior. In covering the assessment of individual differences, this book pays tribute to the interests and activities that Douglas N. Jackson has incorporated into his career as a psychologist. He continues to be a leader in putting academic findings to practical use. He has also inspired generations of students with his mastery of complex concepts and as a personal example of the ability to balance several simultaneous areas of research. Consistent with the focus of Jackson's research, the theme of this book will be how the use of deductive, construct-driven strategies in the assessment of individual differences leads to benefits in terms of the applicability of the assessment instruments and the clarity of the conclusions that can be drawn from the research.

Consumer Behaviour Analysis: The behavioural economics of consumption Jul 12 2021

Bergin and Garfield's Handbook of Psychotherapy and Behavior Change Nov 23 2019 Celebrating the 50th anniversary of a best-selling and renowned reference in psychotherapy research and practice. Now celebrating its 50th anniversary and in its seventh edition, Bergin and Garfield's Handbook of Psychotherapy and Behavior Change, maintains its position as the essential reference volume for psychotherapy research. This bestselling reference remains the most important overview of research findings in psychotherapy. It is a rigorous and evidence-based text for academics, researchers, practitioners, and students. In recognition of the 50th anniversary, this edition contains a Foreword by Allen Bergin while the Handbook covers the following main themes: historical and methodological issues, measuring and evidencing change in efficacy and practice-based research, therapeutic ingredients, therapeutic approaches and formats, increasing precision and scale of delivery, and future directions in the field of psychotherapy research. Chapters have either been completely rewritten and updated or comprise new topics by contributors including: Characteristics of effective therapists Mindfulness and acceptance-based therapies Personalized treatment approaches The internet as a medium for treatment delivery Models of therapy and how to scale up treatment delivery to address unmet needs The newest edition of this renowned Handbook offers state-of-the-art updates to the key areas in psychotherapy research and practice today. Over 60 authors, experts in their fields, from over 10 countries have contributed to this anniversary edition, providing in-depth, measured and insightful summaries of the current field.

You Are What You Risk Jun 18 2019 The #1 international bestselling author of The Gray Rhino offers a bold new framework for understanding and re-shaping our relationship with risk and uncertainty to live more productive and successful lives. What drives a sixty-four-year-old woman to hurl herself over Niagara Falls in a barrel? Why do we often create bigger risks than the risks we try to avoid? Why are corporate boards newly worried about risky personal behavior by CEOs? Why are some nations quicker than others to recognize and manage risks like pandemics, technological change, and climate crisis? The answers define each person, organization, and society as distinctively as a fingerprint. Understanding the often-surprising origins of these risk fingerprints can open your eyes, inspire new habits, catalyze innovation and creativity, improve teamwork, and provide a beacon in a world that seems suddenly more uncertain than ever. How you see risk and what you do about it depend on your personality and experiences. How you make these cost-benefit calculations depend on your culture, your values, the people in the room, and even unexpected things like what you've eaten recently, the temperature, the music playing, or the fragrance in the air. Being alert to these often-unconscious influences will help you to seize opportunity and avoid danger. You Are What You Risk is a clarion call for an entirely new conversation about our relationship with risk and uncertainty. In this ground-breaking, accessible and eminently timely book, Michele Wucker examines why it's so important to understand your risk fingerprint and how to make your risk relationship work better in business, life, and the world. Drawing on compelling risk stories around the world and weaving in economics, anthropology, sociology, and psychology research, Wucker bridges the divide between professional and lay risk conversations. She challenges stereotypes about risk attitudes, re-frames how gender and risk are related, and shines new light on generational differences. She shows how the new science of "risk personality" is re-shaping business and finance, how healthy risk ecosystems support economies and societies, and why embracing risk empathy can resolve conflicts. Wucker shares insights, practical tools, and proven strategies that will help you to understand what makes you who you are -and, in turn, to make better choices, both big and small.

Handbook of Psychology, Clinical Psychology Nov 04 2020 Psychology is of interest to academics from many fields, as well as to the thousands of academic and clinical psychologists and general public who can't help but be interested in learning more about why humans think and behave as they do. This award-winning twelve-volume reference covers every aspect of the ever-fascinating discipline of psychology and represents the most current knowledge in the field. This ten-year revision now covers discoveries based in neuroscience, clinical psychology's new interest in evidence-based practice and mindfulness, and new findings in social, developmental, and forensic psychology.

Marketing Psychology Nov 16 2021 Marketing Psychology portrays the behaviour of consumers as influenced by its environmental consequences and extends this analysis to

marketing management by proposing a novel understanding of the marketing firm. The book undertakes a behaviour analysis of consumer choice, based on a critical extension of radical behaviourism to the interpretation of human economic behaviour. This suggests that consumer behaviour is explained by locating it among the environmental contingencies that shape and maintain it. The result is a view of consumer choice and marketing response which transcends current understanding with profound managerial and policy implications.

Interpreting Consumer Choice Jul 20 2019 Interpretive consumer research usually proceeds with a minimum of structure and preconceptions. This book presents a more structured approach than is usual, showing how a simple framework that embodies the rewards and costs associated with consumer choice can be used to interpret a wide range of consumer behaviours from everyday purchasing and saving, innovative choice, imitation, 'green' consumer behavior, to compulsive behaviors such as addictions (to shopping, to gambling, to alcohol and other drugs, etc). Foxall takes a qualitative approach to interpreting behavior, focusing on the epistemological problems that arise in such research and emphasizing the emotional as well as cognitive aspects of consumption. The author argues that consumer behaviour can be understood with the aid of a very simple model that proposes how the consequences of consumption impact consumers' subsequent choices. The objective is to show that a basic model can be used to interpret consumer behaviour in general, not in isolation from the marketing influences that shape it, but as a course of human choice that is dynamically linked with managerial concerns.

Tic Disorders, Trichotillomania, and Other Repetitive Behavior Disorders Jan 18 2022 Tics, trichotillomania, and habits such as thumb-sucking and nail-biting tend to resist traditional forms of therapy. Their repetitiveness, however, makes these dissimilar disorders particularly receptive to behavioral treatment. Now in soft cover for the first time, this is the most comprehensive guide to behavioral treatment for these common yet understudied disorders. Tic Disorders is geared to researchers but accessible to to patients and their families as well.

Consumers in Context Jun 30 2020 This book, first published in 1996, presents a collection of papers by Gordon Foxall charting the development of the Behavioural Perspective Model (BPM) which he devised in the early 1980s and subsequently developed. The model offers a unique and original behaviour-based theory of consumer choice. In seeking to answer the question 'where does consumer choice take place?' by drawing upon behavioural psychology, Foxall presents an exciting challenge to previous theories whose emphasis has been on the internal working of the consumer's mind in reaching rational decisions and choices. Bringing alive the important subject of economic consumption, this seminal volume will be of great interest to students and researchers in consumer research.

Advances in Applied Social Psychology Dec 25 2019 First published in 1986. Routledge is an imprint of Taylor & Francis, an informa company.

Child and Adolescent Development Dec 17 2021 Child and Adolescent Development: A Behavioral Systems Approach integrates the views of dynamical systems concepts with a behavioural view of development. This combination of perspectives is unique and from it something new emerges - a "behavioral systems approach" to development. It is an approach that incorporates both personal and environmental influences and the constant reciprocal interactions between nature and nurture. The book emphasizes learning as the major process for change in development and the integration of environmental influences with genetic and historical factors. Authors Gary Novak and Martha Pelaez provide a coherent understanding of the learning process in childhood and adolescence and present successful interventions to minimize typical problematic behavior during this period.

Healing with Stories Apr 28 2020 An invitation to observe and learn the therapeutic art of storytelling Healing with Stories brings together a stellar collection of some of the world's most prominent practitioners, taking you inside their thinking and processes for working with metaphors. They represent the panorama of metaphor practice in psychotherapy today with considered, humorous, and compassionate case examples that step you through the intricacies for replicating their work in your own. This is a book for family therapists who work with children, adults, and families, as well as for hypnotherapists, cognitive behavioral therapists, narrative therapists, dynamic therapists, solution-focused therapists, and child therapists. In fact, all therapists who wish to communicate their therapeutic messages with the greatest effectiveness will find this book to be an essential and useful clinical tool. Contributors include: * Richard Kopp * Julie H. Linden * Mikaela J. Hildebrandt * Lindsay B. Fletcher * Steven C. Hayes * Michael D. Yapko * Valerie E. Lewis * Gregory Smit * Joy Nel * Christine Perry * Joyce C. Mills * Rubin Battino * Carol A Hicks-Lankton * Wendel A. Ray * Jana P. Sutton * Robert McNeilly * Roxanna Erickson-Klein * Angela Ebert * Hasham Al Musawi * Teresa Garcia-Sanchez * George W. Burns Praise for Healing with Stories "George Burns has done an expert job of compiling a definitive work that demystifies the ever-versatile metaphor. Whether you are a novice or an expert clinician, you will find a treasury of story interventions along with the 'inside scoop' on how each was created and applied to bring success in nineteen unforgettable case chapters. Better yet, you'll be able to create your own healing metaphors thanks to the expert guidance of a wide range of talented storytellers. Don't miss out on this one!" --Maggie Phillips, PhD, author of Finding the Energy to Heal and coauthor of Healing the Divided Self "If you want to be inspired, entertained, and enlightened, Healing with Stories is the book to read. George Burns, a master storyteller, has assembled a creative, diverse group of clinicians to share their ideas about how metaphor can be used with a variety of problems and clients. The result is a fascinating array of insights into metaphor's role in the healing process." --Richard G. Whiteside, MSW, author of Becoming Dragon

Consumption Matters Jun 11 2021 What does it mean to live in a consumer society and how does this impact on our behaviour? In this insightful and engaging introduction to the psychology of consumption, Cathrine Jansson-Boyd discusses the various ways that consumer activities pervade our everyday lives, whether we are buying the latest trends to keep up with our peers or altering our physical looks so that we can fit the media's beauty mould. Highlighting why the spread of consumption through society is so important, the book looks at the impact on both children and the environment as well as at ethical considerations. Consumption Matters is the essential starting point for both students and general readers interested in consumer psychology.

America's Corporate Finance Directory Sep 14 2021

Psychology and Social Responsibility Mar 28 2020 This book brings together for the first time many of the leading writers and thinkers from the psychological and mental health fields. Contributors include Robert Jay Lifton, Joanna Macy, Roger Walsh and others.

Environmental Psychology Feb 25 2020 "Explores the environment's effects on human wellbeing and behaviour, factors influencing environmental behaviour and ways of encouraging pro-environmental action"--

Handbook of Self-determination Research Aug 01 2020 Papers addressing the role which human motivation plays in a wide range of specialties including clinical psychology, internal medicine, sports psychology, social psychology, and educational psychology.

Final Solutions Oct 23 2019 The nature-nurture debate continues to stir controversy in the social and behavioral sciences. How much of human behavior and development can be attributed to biology and how much to the environment? Can either be said to 'determine' human development? And what are the implications of each view for society? In this important study, a noted developmental psychologist contributes to this debate by confronting the difficult issue of 'doctrines' of human development and the consequences for society of deriving political programs and public policy from them. Beginning with the premise that scientific ideas are not neutral but can be used for either good or evil, Richard Lerner considers the recent history of one such idea, biological determinism, which at times has had the backing of respected scientists, intellectuals, and political leaders. During this century, biological determinism has been coupled with political philosophies that hold that some people are inherently better than others. This has meant that certain groups of people—Jews, Blacks, Native Americans, women—have been stigmatized because of supposedly innate, even 'biological,' differences, with sometimes disastrous consequences. The most notorious instance was Nazi Germany, where 'racial science' given legitimacy by the scientific community, became a cornerstone of the Nazi & Final Solution. Meanwhile, theories of biological determinism continue to find adherents within the scientific community. Konrad Lorenz, who was awarded a Nobel Prize in 1973, was a critical figure in the development of the most recent manifestation of biological determinism—sociobiology. Lerner examines the work of Lorenz and current sociobiologists and the implications of their claims for modern society. He fears that biological determinism may again be co-opted to serve the political agenda of today's reactionary politicians. In fact, Lerner notes, sociobiologists have had to face the fact that organizations such as the fascist National Front party in Britain and its counterparts in France and the United States have selectively seized upon sociobiology to fuel their notions of genetically superior and inferior races.

Environmental Problems/behavioral Solutions Oct 27 2022 A 1984 exploration of the relation between physical environment and human behaviour.

Encyclopedia of Creativity Aug 25 2022 The first edition of the successful Encyclopedia of Creativity served to establish the study of creativity is a field in itself. Now completely updated and revised in its second edition, coverage encompasses the definition of creativity, the development and expression of creativity across the lifespan, the environmental conditions that encourage or discourage creativity, creativity within specific disciplines like music, dance, film, art, literature, etc., the relationship of creativity and mental health, intelligence, and learning styles, and the process of being creative. This reference also appeals to a lay audience with articles specifically on the application of creativity to business settings. Available online via ScienceDirect and in limited print release. Named a 2012 Outstanding Academic Title by the American Library Association's Choice publication Serves as a compendium of reviews of a number of domain-specific areas, such as acting, dance, expressive arts, film, food, music, religion, science, sports, theater, and writing. Creativity and education are examined in articles about thought processes, such as developmental trends in creative abilities and potentials, the enhancement of creativity, intelligence, knowledge, play, prodigies, programs and courses, talent and teaching creativity. Cognitive aspects of creativity can be investigated in articles about altered and transitional states, analogies, attention, cognitive style, divergent thinking, flow and optimal experience, metacognition, metaphors, problem-finding, problem-solving, and remote associates. Covers business and organizational creativity in articles about advertising with art, creative visuals, business/management, creativity coaching, creativity exercises, entrepreneurship, group dynamics, innovation, leadership, organizational culture, organizational development, teams, and training, among others. Explicitly examines the complex interrelationship between society and creativity in articles about awards, conformity and conventionality, the creative sector and class of society, cultural diversity, the dark side of creativity, East vs. West, networking, social psychology, war, zeitgeist, and others. Personal and interpersonal creativity is discussed in articles relating to collaboration, family, life stages, mentors, networking, personal creativity and self-actualization. Focuses on scientific information about creativity, there are also articles that discuss brain and neuropsychology, concepts of creativity, definitions of creativity, expertise, longitudinal studies, researching art, artists and art audiences, research methods, phenomenology research and qualitative research. Online version contains an additional 26 biographies of famously creative people

Encyclopedia of Creativity Apr 21 2022 This encyclopaedia provides specific information and guidance for everyone who is searching for a greater understanding the text includes theories of creativity, techniques for enhancing creativity and individuals who have contributed to creativity.
