Half a Life Mar 09 2021 In this powerful, unforgettable memoir, acclaimed novelist Darin Strauss examines the far-reaching consequences of the tragic moment that has shadowed his whole life. In his last month of high school, he was behind the wheel of his dad's Oldsmobile, driving with friends, heading off to play mini-golf. Then: a classmate swerved in front of his car. The collision resulted in her death. With piercing insight and stark prose, Darin Strauss leads us on a deeply personal, immediate, and emotional journey—graduating high school, going away to college, starting his writing career, falling in love with his future wife, becoming a father. Along the way, he takes a hard look at loss and guilt, maturity and accountability, hope and, at last, acceptance. The result is a staggering, uplifting tour de force. How to Live Oct 04 2020 How to get on well with people, how to deal with violence, how to adjust to losing someone you love? How to live? This question obsessed Renaissance nobleman Michel Eyquem de Montaigne (1533-92), who wrote free-roaming explorations of his thought and experience, unlike anything written before. Into these essays he put whatever was in his head: his tastes in wine and food, his childhood memories, the way his dog's ears twitched when it was dreaming, events in the appalling civil wars raging around him. The Essays was an instant bestseller, and over four hundred years later, readers still come to him in search of companionship, wisdom and entertainment - and in search of themselves. This first full biography of Montaigne in English for nearly fifty years relates the story of his life by way of the questions he posed and the answers he explored.

The Half-Life of Facts Aug 26 2022 New insights from the science of science Facts change all the time. Smoking has gone from doctor recommended to deadly. We used to think the Earth was the center of the universe and that the brontosaurus was a real dinosaur. In short, what we know about the world is constantly changing. Samuel Arbesman shows us how knowledge in most fields evolves systematically and predictably, and how this evolution unfolds in a fascinating way that can have a powerful impact on our lives. He takes us through a wide variety of fields, including those that change quickly, over the course of a few years, or over the span of centuries.

Half-Earth: Our Planet's Fight for Life Oct 16 2021 "An audacious and concrete proposal...Half-Earth completes the 86-year-old Wilson's valedictory trilogy on the human animal and our place on the planet." —Jedediah Purdy, New Republic In his most urgent book to date, Pulitzer Prize-winning author and world-renowned biologist Edward O. Wilson states that in order to stave off the mass extinction of species, including our own, we must move swiftly to preserve the biodiversity of our planet. In this "visionary blueprint for saving the planet" (Stephen Greenblatt), Half-Earth argues that the situation facing us is too large to be solved piecemeal and proposes a solution commensurate with the magnitude of the problem: dedicate fully half the surface of the Earth to nature.

Identifying actual regions of the planet that can still be reclaimed—such as the California redwood forest, the Amazon River basin, and grasslands of the Serengeti, among others—Wilson puts aside the prevailing pessimism of our times and "speaks with a humane eloquence which calls to us all" (Oliver Sacks).

Half a Life Jan 07 2021 In a narrative that moves with dreamlike swiftness from India to England to Africa, Nobel Laureate V. S. Naipaul has produced his finest novel to date, a bleakly resonant study of the fraudulent bargains that make up an identity. The son of a Brahmin ascetic and his lower-caste wife, Willie Chandran grows up sensing the hollowness at the core of his father's self-denial and vowing to live more authentically. That search takes him to the immigrant and literary bohemia of 1950s London, to a facile and unsatisfying career as a writer, and at last to a decaying Portuguese colony in East Africa, where he finds a happiness he will then be compelled to betray. Brilliantly orchestrated, at once elegiac and devastating in its portraits of colonial grandeur and pretension, Half a Life represents the pinnacle of Naipaul's career.

Molybdenum-99 for Medical Imaging Sep 15 2021 The decay product of the medical isotope molybdenum-99 (Mo-99), technetium-99m (Tc-99m), and associated medical isotopes iodine-131 (I-131) and xenon-133 (Xe-133) are used worldwide for medical diagnostic imaging or therapy. The United States consumes about half of the world's supply of Mo-99, but there has been no domestic (i.e., U.S.-based) production of this isotope since the late 1980s. The United States imports Mo-99 for domestic use from Australia, Canada, Europe, and South Africa. Mo-99 and Tc-99m cannot be stockpiled for use because of their short half-lives. Consequently, they must be routinely produced and delivered to medical imaging centers. Almost all Mo-99 for medical use is produced by irradiating highly enriched uranium (HEU) targets in research reactors, several of which are over 50 years old and are approaching the end of their operating lives. Unanticipated and extended shutdowns of some of these old reactors have resulted in severe Mo-99 supply shortages in the United States and other countries. Some of these shortages have disrupted the delivery of medical care. Molybdenum-99 for Medical Imaging examines the production and utilization of Mo-99 and associated medical isotopes, and provides recommendations for medical use.

Differential Equations Nov 24 2019 Incorporating an innovative modeling approach, this book for a one-semester differential equations course emphasizes conceptual understanding to help users relate information taught in the classroom to real-world experiences. Certain models reappear throughout the book as running themes to synthesize different concepts from multiple angles, and a dynamical systems focus emphasizes predicting the long-term behavior of these recurring models. Users will discover how to identify and harness the mathematics they will use in their careers, and apply it effectively outside the classroom. Medical Isotope Production Without Highly Enriched Uranium Feb 08 2021 This book is the product of a congressionally mandated study to examine the feasibility of eliminating the use of highly enriched uranium (HEU) in reactor fuel, reactor targets, and medical isotope production facilities. The book focuses primarily on the use of HEU for the production of the medical isotope molybdenum-99 (Mo-99), whose decay product, technetium-99m³ (Tc-99m), is used in the majority of medical diagnostic imaging procedures in the United States, and secondarily on the use of HEU for research and test reactor fuel. The supply of Mo-99 in the U.S. is likely to be unreliable until newer production sources come online. The reliability of the current supply system is an important medical isotope concern; this book concludes that achieving a cost difference of less than 10 percent in facilities that will need to convert from HEU- to LEU-based Mo-99 production is much less important than is reliability of supply.

Half Lives Jun 24 2022 'Half Lives shines a light on the shocking history of the world's toxic love affair with a deadly substance, radium. Unnerving, fascinating, informative and truly frightening.' Hallie Rubenhold, author of *The Five* 'The story of this supposed cure-all in everyday 20th century life is fascinating and well told.' Brian Maye, Irish Times Lucy Jane Santos presents the surprising history of radium in everyday life. Of all the radioactive elements discovered at the end of the 19th century, it was radium that became the focus of both public fascination and entrepreneurial zeal. *Half Lives* tells the fascinating, curious, sometimes macabre story of the element through its ascendance as a desirable item - a present for a queen, a prize in a treasure hunt, a glow-in-the-dark dance costume - to its role as a supposed cure-all in everyday 20th-century life, when medical practitioners and business people (reputable and otherwise) devised ingenious ways of commodifying the new wonder element, and enthusiastic customers welcomed their radioactive wares into their homes. Historian Lucy Jane Santos - herself the proud owner of a formidable collection of radium beauty treatments - delves into the stories of these products and details the gradual downfall and discredit of the radium industry through the eyes of the people who bought, sold and eventually came to fear the once-fetishized substance. She reveals a new history of radium, one in which the stories of those previously dismissed as quacks and fools are brought to life, as part of a unique examination of the interplay between science and popular culture.

Chemistry: An Atoms First Approach Jul 25 2022 Steve and Susan Zumdahl's texts focus on helping students build critical thinking skills through the process of becoming independent problem-solvers. They help students learn to think like a chemist so they can apply the problem solving process to all aspects of their lives. In *CHEMISTRY: AN ATOMS FIRST APPROACH*, the Zumdahls use a meaningful approach that begins with the atom and proceeds through the concept of molecules, structure, and bonding, to more complex materials and their properties. Because this approach differs from what most students have experienced in high school courses, it encourages them to focus on conceptual learning early in the course, rather than relying on memorization and a plug and chug method of problem solving that even the best students can fall back on when confronted with familiar material. The atoms first organization provides an opportunity for students to use the tools of critical thinkers: to ask questions, to apply rules and models and to evaluate outcomes. From Strength to Strength Jun 19 2019 The #1 New York Times Bestseller 'This book is amazing. We've all read it cover to cover. We couldn't put it down.' - Chris Evans From the bestselling author and columnist behind *The Atlantic's* popular "How to Build a Life" series, a guide to transforming the life changes we fear into a source of strength. In the first half of life, ambitious strivers embrace a simple formula for success in work and life: focus single-mindedly, work tirelessly, sacrifice personally, and climb the ladder relentlessly. It works. Until it doesn't. It turns out the second half of life is governed by different rules. In middle age, many strivers begin to find success coming harder and harder, rewards less satisfying, and family relationships withering. In response, they do what strivers always do: they double down on work in an attempt to outrun decline and weakness, and deny the changes that are becoming more and more obvious. The result is often anger, fear, and disappointment at a time in life that they imagined would be full of joy, fulfillment, and pride. It doesn't have to be that way. In *From Strength to Strength*, happiness expert and bestselling author Arthur C. Brooks reveals a path to beating the "striver's curse." Drawing on science, classical philosophy, theology, and history, he shares counterintuitive strategies for releasing old habits and forming new life practices, showing you how to: - Kick the habits of workaholicism, success addiction, and self-objectification - Meditate on death in order to beat fear and live well - Start a spiritual adventure - Embrace weakness in a way that turns it into strength. Change in your life is inevitable, but suffering is not. *From Strength to Strength* shows you how to accept the gifts of the second half of life with grace, joy, and ever deepening purpose.

Precalculus Dec 18 2021 "Precalculus is intended for college-level precalculus students. Since precalculus courses vary from one institution to the next, we have attempted to meet the needs of as broad an audience as possible, including all of the content that might be covered in any particular course. The result is a comprehensive book that covers more ground than an instructor could likely cover in a typical one- or two-semester course; but instructors should find, almost without fail, that the topics they wish to include in their syllabus are covered in the text. Many chapters of OpenStax College Precalculus are suitable for other freshman and sophomore math courses such as College Algebra and Trigonometry; however, instructors of those courses might need to supplement or adjust the material. OpenStax will also be releasing College Algebra and Algebra and trigonometry titles tailored to the particular scope, sequence, and pedagogy of those courses."--Preface.
