society to an urban, industrial one. So far, both transitions have been spectacularly successful. China is the fastest-growing economy in the world, with per capita incomes more than quadrupling since 1978, achieving in two generations what took other countries centuries. Although swift growth and structural change have resolved many problems, they also have created new challenges: employment insecurity, growing inequality, stubborn poverty, mounting environmental pressures, rising costs of food self-sufficiency, and periods of macroeconomic instability stemming from incomplete reforms. Unmet, these challenges could undermine the sustainability of growth, and China's promise could fade. China 2020, a seven-volume set, examines China's recent history, where it is today, and the path it should follow during the first two decades of the 21st century.

The volume in the set entitled, Old Age Security: Pension Reform in China highlights two severe difficulties

current pension system: the urgent and immediate problem of the pension burden placed on state-owned enterprises, and the longer-term predicament arising from a rapidly aging population. State enterprises inherited heavy pension obligations from the central planning era. With the transition to a market economy, employment in the state enterprise sector is declining, while the number of pensioners is rising rapidly. The study recommends a unified pension system that includes both mandatory funded individual accounts and a social insurance scheme. It also endorses a sustainable contribution rate that attaches considerable importance to long-term financial viability (more than 60 years) and examines the risks associated with low compliance rates and low interest rates.

Guarding a Sacred Trust Apr 09 2021 This is a plan for disaster recovery where the survivors are the key part of a swift and low cost repair of the damage. It is not a technical work such that everyone can read it and enjoy a few hours of learning. It begins in the future when you listen in to a mayor's up date from his disaster recovery team feeling that the recovery is proceeding better they had hoped. This starts when you are rescued and ends when you are leaving to live in your rebuilt house. More information is provided on how the Peoples' Village Plan can work and the preparation prior to a disaster to get ready. This is all summed up with a way to modify the plan to repair Katrina, and similar Gulf Coast disasters where people are still waiting for help. You don't

surgical robotics and remote technologies leading to the goal of achieving the benefits of traditional surgery with the least disruption to the normal functions of the human body. Written by experts in the field, chapters cover the fundamental principles of robotic surgery and provide clear instruction on their clinical application and long term results. Most notably, one chapter on “The Blueprint for the Establishment of a Successful Robotic Surgery Program: Lessons from Admiral Hymen R. Rickover and the Nuclear Navy” outlines the many valuable lessons from the transformative change which was brought about by the

introduction of nuclear technology into the conventional navy with Safety as the singular goal of the change process. Robotics represents a monumental triumph of surgical technology. Undoubtedly, the safety of the patient will be the ultimate determinant of its success. The second edition of Robotic Surgery aims to erase the artificial boundaries of specialization based on regional anatomy and serves as a comprehensive multispecialty reference for all robot surgeons. It allows them to contemplate crossing boundaries which are historically defined by traditional open surgery.
