How to perform? Which combination of treatments to choose? *Controversies in the Management of Keratoconus* provides the widely used treatment options for keratoconus including collagen corneal cross-linking (CXL) covering all the available techniques, intrastromal corneal ring segments (ICRS), phakic intra-ocular lenses (IOLs), photorefractive keratectomy (PRK) combined or not with CXL penetrating keratoplasty (PK) and deep anterior lamellar keratoplasty (DALK). The Rhetoric of Pregnancy Apr 07 2021 It is a truth widely acknowledged that if you're pregnant and can afford one, you're going to pick up a pregnancy manual. From *What to Expect When You're Expecting* to *Pregnancy for Dummies*, these guides act as portable mentors for women who want advice on how to navigate each stage of pregnancy. Yet few women consider the effect of these manuals—how they propel their readers into a particular system of care or whether the manual they choose reflects or contradicts current medical thinking. Using a sophisticated rhetorical analysis, Marika Seigel works to deconstruct pregnancy manuals while also identifying ways to improve communication about pregnancy and healthcare. She traces the manuals' evolution from early twentieth-century tomes that instructed readers to unquestioningly turn their pregnancy management over to doctors, to those of the women's health movement that encouraged readers to engage more critically with their care, to modern online sources that sometimes serve commercial interests as much as the mother's. The first book-length study of its kind, *The Rhetoric of Pregnancy* is a must-read for both users and designers of our prenatal systems—doctors and doulas, scholars and activists, and anyone interested in encouraging active, effective engagement.

The Sun: A Laboratory for Astrophysics May 20 2022 As in the days following Skylab, solar physics came to the end of an era when the Solar Maximum Mission re-entered the earth's atmosphere in December 1989. The 1980s had been a pioneering decade not only in space- and ground-based studies of the solar atmosphere (Solar Maximum Mission, Hinotori, VLA, Big Bear, Nancay, etc.) but also in solar-terrestrial relations (ISEE, AMPTE), and solar interior neutrino and helioseismology studies. The pace of development in related areas of theory (nuclear, atomic, MHD, beam-plasma) has been equally impressive. All of these raised tantalizing further questions about the structure and dynamics of the Sun as the prototypical and best observed star. This Advanced Study Institute was timed at a pivotal point between that decade and the realization of Yohkoh, Ulysses, SOHO, GRANAT, Coronas, and new ground-based optical facilities such as LEST and GONG, so as to teach and inspire the up and coming young solar researchers of the 1990s. The topics, lecturers, and students were all chosen with this goal in mind, and the result seems to have been highly successful by all reports.
