Current List of Medical Literature Apr 19 2022 Includes section, "Recent book acquisitions" (varies: Recent United States publications) formerly published separately by the U.S. Army Medical Library.

Diagnosis and Management of Femoroacetabular Impingement Apr 26 2020 This book is unique in combining an exclusive focus on femoroacetabular impingement (FAI) with an evidence-based approach and the involvement of a diverse group of global experts. It is designed to meet the worldwide need for a summary of current evidence that will readily assist the physician in establishing the most accurate diagnosis and providing the best available treatment. The coverage is wide ranging, encompassing clinical examination, differential diagnosis, imaging, indications for surgery, contemporary arthroscopic and open management, treatment of labial tears, cartilage injury management, non-operative management, rehabilitation, treatment of complications, and revision surgery. Trainees, physicians, surgeons, and allied health care professionals who treat young adults with hip pain will find the book to be an excellent source of information on what procedures are most helpful and how they should be implemented.

Encyclopedia of Great Popular Song Recordings Dec 03 2020 The Encyclopedia of Great Popular Song Recordings, Volumes 1 and 2 covers the full range of popular music recordings with virtually unprecedented breadth and depth. In this 2-volume encyclopedia, Sullivan explores approximately 1,000 song recordings from 1889 to the present, telling the stories behind the songs, recordings, performers, and songwriters. From the Victorian parlor ballad and ragtime hit at the end of the 19th century to today's rock classics, the Encyclopedia progresses through a parade popular music styles, from jazz to blues to country Western, as well as the important but too often neglected genres of ethnic and world music, gospel, and traditional folk. This book is the ideal research tool for lovers of popular music in all its glorious variety.

Hypercholesterolemia, Hypocholesterolemia, Hypertriglyceridemia, in Vivo Kinetics Oct 01 2020 The past two decades have seen steady progress in our understanding of the pathogenesis of atherosclerosis. The role of low density lipoprotein (LDL) increase and of LDL receptor deficiency or malfunctions in familial hypercholesterolemia has been largely enlightened by the works of Brown and Goldstein. These authors postulated also that modification of LDL to a form recognized by the scavenger or acetyl-LDL receptor may be required for lipid loading of macrophage-derived foam cells in the lesions. A growing body of evidence suggests that oxidative modification of LDL could enhance its atherogenicity by its implication as a factor in the generation of foam cells. Thus, if the role of LDL in the pathogenesis of hypercholesterolemia was well established a great deal of information appears currently on new approaches such as the mechanisms leading to the accumulation of foam cells, the impact of LDL structural alterations, notably oxidation and the role of gene mutations of apolipoprotein B and/or LDL receptor. The opening topic is devoted to these new avenues outlined in the field of hypercholesterolemia. The first part concerns the genetic aspects of atherosclerosis: mainly the genetics of apo B lipoproteins, their transcriptional regulation, the amino acid mutations of the apo B gene and of the LDL receptor gene, the structural domains and the acylation sites of apo B.

Lloyd's Register of Shipping 1818 Shipowners Apr 07 2021 The Lloyd's Register of Ships records the details of merchant vessels over 100 gross tonnes, which are self propelled and sea-going, regardless of classification. Before the time, only those vessels classed by Lloyd's Register were listed. Vessels are listed alphabetically by their current name.

Ullmann's Food and Feed, 3 Volume Set Jan 24 2020 A compilation of 58 carefully selected, topical articles from the Ullmann's Encyclopedia of Industrial Chemistry, this three-volume handbook provides a wealth of information on economically important basic foodstuffs, raw materials, additives, and processed foods, including a section on animal feed. It brings together the chemical and physical characteristics, production processes and production figures, main uses, toxicology and safety information in one single resource. More than 40 % of the content has been added or updated since publication of the 7th edition of the Encyclopedia in 2011 and is available here in print for the first time. The result is a "best of Ullmann's", bringing the vast knowledge to the desks of professionals in the food and feed industries.

Dislocations in Solids Nov 02 2020 Bacon and Osetsky present an atomistic model of dislocation-particle interactions in metal systems, including irradiated materials. This work is important in simulating actual behavior, removing earlier reliance on assumed mechanisms for dislocation motion. New mechanisms for dislocation generation under shock loading are presented by Meyers et al. These models provide a basis for understanding the constitutive behavior of shocked material. Saada and Dirras provide a new perspective on the Hall-Petch relation, with particular emphasis on nanocrystals. Of particular significance, deviations from the traditional stress proportional to the square-root of grain size relation are explained. Robertson et al consider a number of effects of hydrogen on plastic flow and provide a model that provides an explanation of the broad range of properties. . Flow stress of metal systems with particle hardening, including radiation effects New model for dislocation kinetics under shock loading Explanation of effects of nanoscale grain size on strength Mechanism of hydrogen embrittlement in metal alloys- Meyers' Dynamic Radiology of the Abdomen Aug 11 2021 The Sixth Edition continues the tradition of this great book by applying anatomic knowledge to state-of-the-art imaging. Chapters have been reorganized to help the reader better interpret imaging studies by clearly demonstrating what to expect and where to look for disease spread from each individual organ. Up-to-date chapters explore the dynamic concept, explain its embryologic and anatomic basis, and classify the mechanisms of disease progression. The latest imaging modalities, including CT, MRI, ultrasound, and PET, are incorporated throughout.

Get Your Loved One Sober Jun 21 2022 The first general consumer book ever on the powerful, award-winning, scientifically proven new system of intervention that is turning the recovery field on its head. Historically there have been few options available for individuals seeking help for treatment-resistant loved ones suffering from substance abuse. Co-author Dr. Robert Meyers spent ten years developing a treatment program that helps Concerned Significant Others (CSOs) both improve the quality of their lives and to learn how to make treatment an attractive option for their partners who are substance abusers. Get Your Loved One Sober describes this multi-faceted program that uses supportive, non-confrontational methods to engage substance abusers into treatment. Called Community Reinforcement and Family Training (CRAFT), the program uses scientifically validated behavioral principles to reduce the loved one's substance use and to encourage him or her to seek treatment. Equally important, CRAFT also helps loved ones reduce personal stress and introduce meaningful, new sources of satisfaction into their life. Key Features: CRAFT is more effective than other types of interventions. This breakthrough new system is sweeping the recovery field. This is its first introduction to the general public. Contains simple exercises readers can practice at their own pace, with no costly or heart-breaking interventions. Proven successful for numerous addictions, not just alcoholism.

A list of beach web links, frequently asked questions and beach reports and references are available at this site.

Protein-based Engineered Nanostructures Oct 21 2019 This book is devoted to the engineering of protein-based nanostructures and nanomaterials. One key challenge in nanobiotechnology is to be able to exploit the natural repertoire of protein structures and functions to build materials with defined properties at the nanoscale using "bottom-up" strategies. This book addresses in an integrated manner all the critical aspects that need to be understood and considered to design the next generation of nano-bio assemblies. The book covers first the fundamentals of the design and features of the protein building blocks and their self-assembly illustrating some of the most relevant examples of nanostructural design. Finally, the book contains a section dedicated to demonstrated applications of these novel bioinspired nanostructures in different fields from hybrid nanomaterials to regenerative medicine. This book provides a comprehensive updated review of this rapidly evolving field.

Official Descriptive and Illustrated Catalogue Jun 28 2020

Carbon-Carbon σ -Bond Formation Aug 23 2022 Volume 3 covers carbon-to-carbon single bond forming reactions involving sp^3 , sp^2 and sp carbon centers, but only those which do not involve additions to C-X σ -bonds. The volume first compares and contrasts the alkylation reactions of all types of sp^3 carbon nucleophiles and also covers vinyl and alkynyl carbanions. Following on from Volume 2, a separate section covers Friedel-Crafts alkylation reactions, which is complemented by discussions of polyene cyclizations and electrophilic transannular cyclizations in synthesis. Coupling reactions leading to σ -bond formation, and involving all types of combinations of sp^3 , sp^2 and sp carbon centers are next covered, including those reactions based on pinacol, acyloin and phenol oxidative coupling reactions, and also the Kolbe reaction. Rearrangement reactions, leading to carbon-to-carbon σ -bond formation, are often used in a clever manner in synthesis. The volume includes all those rearrangement reactions based on intermediate carbonium ions and carbanions, and also includes the benzil-benzilic acid and the Wolff rearrangements. The volume closes with coverage of carbonylation reactions, and the use of carbene insertion reactions into the C-H bond in synthesis.

Intangible Sep 24 2022 Book One in the highly rated Intangible Series...what readers are calling unexpected, exciting, heart-breaking, and magical. "One rock star start to a very promising series!" (Misty Baker). Twins Sera and Luke Raine have a well-kept secret--she heals with a touch of her hand, he sees the future. All their lives they've helped those in need on the sly. They've always thought of their abilities as being a gift. Then Luke has a vision that Sera is killed. That gift they've always cherished begins to feel an awful lot like a curse. Because the thing about Luke's ability? He's always right. And he can't do anything about it.
