Subversive Seduction Jul 21 2019 Male-male rivalry and female passive choice, the two principal tenets of Darwinian sexual selection, raise important ethical questions in *The Descent of Man*--and in the decades since--about the subjugation of women. If female choice is a key component of evolutionary success, what impact does the constraint of women's choices have on society? The elaborate courtship plots of 19th century Spanish novels, with their fixation on suitors and selectors, rivalry, and seduction, were attempts to grapple with the question of female agency in a patriarchal society. By reading Darwin through the lens of the Spanish realist novel and vice versa, Travis Landry brings new insights to our understanding of both: while Darwin's theories have often been seen as biologically deterministic, Landry asserts that Darwin's theory of sexual selection was characterized by an open ended dynamic whose oxymoronic emphasis on "passive" female choice carries the potential for revolutionary change in the status of women.

Traveler Response to Transportation System Changes Handbook, Third Edition: Chapter 19, Employer and Institutional TDM

Strategies Jul 01 2020 TRB's Transit Cooperative Research Program (TCRP) Report 95: Traveler Response to Transportation System Changes, Chapter 19 - Employer and Institutional TDM Strategies pair-wises comparisons to explore the relative importance of particular categories of TDM strategies, such as support versus incentives, as well as the particular strategies themselves, such as transit subsidy versus a high-occupancy vehicle parking discount. TDM (transportation demand management or travel demand management) is a process that can encompass a variety of measures intended to influence travel choices. TDM is used to manage heavy traffic demand and parking requirements, and to enhance the effectiveness of transit services. This report is part of TCRP's Traveler Response to Transportation System Changes Handbook series. The overarching objective of the Traveler Response to Transportation System Changes Handbook is to equip members of the transportation profession with a comprehensive, readily accessible, interpretive documentation of results and experience obtained across the United States and elsewhere from (1) different types of transportation system changes and policy actions and (2) alternative land use and site development design approaches. The Handbook, organized for simultaneous print and electronic chapter-by-chapter publication, treats each chapter essentially as a stand-alone document. Each chapter includes text and self-contained references and sources on that topic. The Handbook user should, however, be conversant with the background and guidance provided in TCRP Report 95: Chapter 1, Introduction. Upon completion of the Report 95 series, the final Chapter 1 publication will include a CD-ROM of all 19 chapters.
