Company's DNA Building Innovation Capability in Organizations

Creativity and Innovation in Organizations May 30 2020

This book reflects on the increasing variety of perspectives in organizational innovation research, paying attention to the antecedents, but also to the outcomes, of innovation. Some chapters analyze the 'dark side' of innovation, including the potential negative consequences of innovative behaviors, or of defying the innovation maximization fallacy. Others explicitly consider affective responses after innovation efforts, and

assume that positive or negative effects rely on the context in which innovations occur, and on the way in which people manage the process of innovation. Several contributions adopt the dialectic approach by considering the multiple pathways and mechanisms that could lead to innovation at organizations. Most of the chapters include the interaction of actors' characteristics (from employees or teams) together with situational constraints from the task or the social context, and outline the

relevance of processes like team learning; motivation variables like basic need satisfaction; congruence of motives or meaningfulness at work; dynamics of communication networks; and affective variables. This edited collection offers a rich picture of current research and management trends in the field and contributes constructively toward promoting the dialectic perspective on creativity and innovation in the workplace. This book was originally published as a special issue of the European Journal of Work and Organizational Psychology.

coauthors of the highly successful Team Topologies, provide proven patterns for a successful remote-first approach to teams. Using simple tools for dependency tracking and patterns from Team Topologies, such as the Team API, organizations will find that well-defined team interactions are key to effective IT delivery in the remote-first world. This workbook explores several aspects of team-first remote work, including: •How the new “remote-first” world is highlighting existing poor team interactions within organizations. •Why organizations should use the Team API pattern to define and communicate the focus of

teams. •How organizations can track and remove team-level dependencies. •How and why organizations should design inter-team communications consciously. •How and why organizations can use the three team interaction modes from Team Topologies (collaboration, x-as-a-service, and facilitating) to help. The ideas and patterns presented here will help your organization become more effective with a team-based, remote-first approach to building and running software systems.

08 2021 This is a story of reinvention. Jim Whitehurst, celebrated president and CEO of one of the world's most revolutionary software companies, tells first-hand his journey from traditional manager (Delta Air Lines, Boston Consulting Group) and “chief” problem solver to CEO of one of the most open organizational environments he'd ever encountered. This challenging transition, and what Whitehurst learned in the interim, has paved the way for a new way of managing—one this modern leader sees as the only way companies will successfully function in the future. collaboration across boundaries, and enable greater commitment and creativity. This totally new approach for digitally-enabled collaboration doesn't stop at the edge of an organization's boundary but extends beyond it in space and time. We refer to these new ways of organizing as "braids" - an intertwined network of contributors with different capabilities, not controlled or managed by a formal hierarchy, who work together to invent ways to accomplish a common purpose in line with organization's mission and strategy. Braids allow significant advantages over traditional, hierarchical, mechanistic and bounded ways

of organizing. These include access to knowledge and capabilities that are key to achieving breakthrough levels of performance; improved coordination among individuals and groups performing interdependent tasks; increased organizational agility; enhanced knowledge-processing as experts contribute more directly to the most important technical and strategic decisions; and greater motivation, as people team together to leverage their capabilities to innovate and accelerate performance. There are inventors (people who have new and unique ideas), problem solvers (people who have ideas about how to correct a previous error) and entrepreneurs (people who transform ideas into realities). the small groups within those organizations work. In most organizations, the work that produces value for customers is carried out by teams, and increasingly, by flexible team-like entities. The pace of change and the fluidity of most work structures means that it's not really about creating effective teams anymore, but instead about leading effective teaming. Teaming shows that organizations learn when the flexible, fluid collaborations they encompass are able to learn. The problem is teams, and other dynamic groups, don't learn naturally.

Edmondson outlines the factors that prevent them from doing so, such as interpersonal fear,

irrational beliefs about failure, groupthink, problematic power dynamics, and information hoarding. With Teaming, leaders can shape these factors by encouraging reflection, creating psychological safety, and overcoming defensive interpersonal dynamics that inhibit the sharing of ideas.

Further, they can use practical management strategies to help organizations realize the benefits inherent in both success and failure.
