**The Formation and Logic of Quantum Mechanics** Jul 13 2021 This book analyzes the intricate logical process through which the quantum theory was developed, and shows that the quantum mechanics thus established is governed by stereo-structural logic. The method of analysis is based on Mituo Taketani’s three-stage theory of scientific cognition, which was presented and developed in close connection with Yukawa’s theory of the meson. According to the three-stage theory, scientific cognition proceeds through a series of coiling turns of the phenomenological, substantialistic and essentialistic stages. The old quantum mechanics is shown to be in a substantialistic stage, followed by the quantum mechanics in the corresponding essentialistic stage.

facts, their interpretation and formalization in a very readable form for physicists thereby justifying the realistic philosophical principles adopted by the authors for scientific cognition. It can especially be recommended to lecturers of quantum physics who like to include some history into their lecture.” Zentralblatt MATH *Studies* Sep 03 2020

**Gravity’s Ghost and Big Dog** Sep 15 2021 Gravity’s Ghost and Big Dog brings to life science’s efforts to detect cosmic gravitational waves. These ripples in space-time are predicted by general relativity, and their discovery will not only demonstrate the truth of Einstein’s theories but also transform astronomy. Although no gravitational wave has ever been directly detected, the previous five years have been an especially exciting period in the field. Here sociologist Harry Collins offers readers an unprecedented view of gravitational wave research and explains what it means for an analyst to do work of this kind. Collins was embedded with the gravitational wave physicists as they confronted two possible discoveries—“Big Dog,” fully analyzed in this volume for the first time, and the “Equinox Event,” which was first chronicled by Collins in Gravity’s Ghost. Collins records the agonizing arguments that arose as the scientists worked out what they had seen and how to present it to the world, along the way demonstrating how even the most statistical of sciences rest on social and philosophical choices. Gravity’s

**Reading with Allah** Dec 18 2021 Based on extensive fieldwork and archival records, this book traces the emergence and flourishing of madrasas and the myriad ways in which they impact upon local Muslim communities, especially in West Bengal. It also addresses issues of identity, ‘secular’ education and gender in this context, while exploring the myths that surround these institutions. Amongst other things, it interrogates why Muslim communities prefer sending their sons to government schools to receive a secular education, while the daughters are sent to madrasas.

this book shows educators how to relate this research to their own practice. Educators' collective work broadens the scope of an organization's reach, and through this effort, the organization grows its social capital in its local community and beyond. This book offers opportunities to engage in processes that lead toward organizational learning by attending to the professional growth of the educators. Tran and Halversen show how learning together can shape the language and meanings by which educators do and talk about their work to support visitors' experiences. The book provides guidance on how teams of educators can build community as they engage in reflective practice. *Reflecting on Practice for STEM Educators* will be essential reading for leaders of any organization that aims to educate and engage the public in science, technology, engineering, and mathematics. It will be particularly useful to educators who work in museums, zoos, aquariums, botanical gardens, youth organizations, after-school programs, and nature, science, and conservation centres.

**How to Write a Good Scientific Paper** Dec 26 2019 Many scientists and engineers consider themselves poor writers or find the writing process difficult. The good news is that you do not have to be a talented writer to produce a good scientific paper, but you do have to be a careful writer. In particular, writing for a peer-reviewed scientific or engineering journal requires learning and executing a specific formula for presenting scientific work. This book is all about teaching the style and conventions of writing for a peer-reviewed scientific journal. From structure to style, titles to tables, abstracts to author lists, this book gives practical advice about the process of writing a paper and getting it published.

Corruption comes the prescription on how to end the plague infecting our medical community. Ending Plague continues the New York Times bestselling team of Dr. Judy A. Mikovits and Kent Heckenlively with legendary scientist, Dr. Francis W. Ruscetti joining the conversation. Dr. Ruscetti is credited as one of the founding fathers of human retrovirology. In 1980, Dr. Ruscetti's team isolated the first pathogenic human retrovirus, HTLV-1. Ruscetti would eventually go on to work for thirty-eight years at the National Cancer Institute. Dr. Ruscetti was deeply involved in performing some of the most critical HIV-AIDS research in the 1980s, pioneered discoveries in understanding the workings of the human immune system in the 1990s, isolating a new family of mouse leukemia viruses linked to chronic diseases in 2009, and offers his insights into the recent COVID-19 pandemic. In 1991, Ruscetti received the Distinguished Service Award from the National Institutes of Health. Dr. Ruscetti offers a true insider's portrait of nearly four decades at the center of public health. His insights into the successes and failures of government science will be eye-opening to the general public. You will read never-before-revealed information about the personalities and arguments which have been kept from view behind the iron curtain of public health. Can we say our scientists are protecting us, or is another agenda at work? For most of his decades at the National Cancer Institute, Dr. Ruscetti has been in almost daily contact

**The Death of a Scientist** Feb 20 2022 A contemporary and detailed look at the reality behind the PhD degrees and postdoctoral fellowships in academia. The book explores some of the most pressing issues and unique challenges currently facing the doctoral and postdoctoral programs both on a local institutional level and on a global one where multiple complex factors influencing and governing the academic environment take place. The interrelated nature of these challenges together with discussions over certain historical trends and demographics offer a unique perspective on some often

overlooked topics such as academic advisors and mentoring, increasing job insecurity, career prospects, mental issues, discrimination and women in science, ever growing need for funding, increasing pressure for high-profile research, internationalization of science, trends in university management, higher education dynamics, and government policies, backed with references to published research, national and international surveys, and census data. Today, most of the PhD programs have been accommodated to the benefit of the university with disregard to any sustainable demand-and-supply job market strategies, contrary to the original ideas behind their inception. The result is an over-flooded job market and huge underemployment rates among doctorate holders. Infused with a narrative of a rich mix of personal experiences, observations, and impressions, all dressed in humor (mostly dark), sarcasm, irony, disbelief, and often outright criticism, this text does not shy away from asking uncomfortable questions and even attempts to provide answers to some of them. At the same time it also offers practical advice for those considering and those who already have dared to tread the PhD path.
