regulations that explore a variety of legal issues in the sports industry. The early chapters provide an overview of sports law in general terms and explore its impact on race, politics, religion, and everyday affairs. Later chapters address hot button issues such as gender equity, drug testing, and discrimination. Written from a sport management perspective, rather than from a lawyer's, this text covers all the major areas presented in sports law today including: cases relating to torts, contracts, intellectual property, and agents. Factual scenarios throughout the text

allow students to critically examine and apply sport management principles to legal issues facing the sports executive. Rituals of Greek Hero-Cults in the Archaic to the Early Hellenistic Period

Mar 20 2022 This study questions the traditional view of sacrifices in hero-cults during the Archaic to the early Hellenistic periods. The analysis of the epigraphical and literary evidence for sacrifices to heroes in these periods shows, contrary to the traditional notion, that the main ritual in hero-cults was a thysia at which the worshippers consumed the meat from the animal victim. A particular handling of the animal's blood or a holocaust, rituals previously taken to be typical for heroes, can rarely be documented and

as marginal features in hero-cults. The terms eschara, escharon, bothros, enagizein, enagisma, enagismos and enagisterion, believed to be characteristic for hero-cults, are seldom used in hero-contexts before the Roman period and occur mainly in the Byzantine lexicographers and in the scholia. Since the main kind of sacrifice in hero-cults was a thysia, a ritual intimately connected with the social structure of society, the heroes must have fulfilled the same role as the gods within the Greek religious system. The fact that the heroes were dead seems to have been of little

significance for the sacrificial rituals and it is questionable whether the rituals of hero-cults are to be considered as originating in the cult of the dead.

Organizational Cultures of Remembrance Jul 12 2021

In a business world predominantly oriented toward the future, it has paradoxically become ever more common that companies turn towards their pasts. This book empirically explores the phenomenon of organizational remembrance from a holistic cultural perspective. Based on a twelve-month ethnographic case study conducted at the headquarters of the

automobile company, AUDI AG, this study dissects the relationships between memory, identity, and image in a corporate setting. The greater aim in doing so is twofold: First, this study examines exactly why and how a company officially manages its past in terms of 'history' and 'tradition.' And second, this study scrutinizes what effect organizational remembrance has on the workforce - how it impacts their collective identification with a corporate community and influences their understanding of their daily working life. By investigating the

different stakeholder groups, as well as their practices, media, mental models, and other vehicles of remembrance, an integrated account is offered which makes sense of the complex cultural forces at work in the corporate handling of the past, the present, and the future. **Breath Analysis for Clinical Diagnosis and Therapeutic Monitoring** Apr 28 2020 This book describes how the analysis of the trace gases in exhaled breath can be used for non-invasive clinical diagnosis of disease and for monitoring the effectiveness of therapy. This approach offers an important addition

to the diagnostic techniques available to medicine, having the advantage that on-line breath analysis can provide information to the clinician immediately and thus facilitate rapid diagnosis and treatment. The book is a compilation of contributions to a conference held in Dornbirn, Austria, 23-26 September 2004 on various aspects of this new topic. Written by the foremost workers in the field, it will provide clinicians and others in the medical fraternity with an up-to-date summary of the status of the subject. The wide scope of the

Chrysoloras's
teaching in
Florence (c. 1397)
and the end of the
activity of Aldo
Manuzio and
Andrea Asolano in
Venice (c. 1529).
This is the first step
in a major
investigation into
the knowledge of
Greek and its
dissemination in
Western Europe:
the selection of the
texts and the first
milestones in
teaching methods
were put together
in that period,
through the work of
scholars like
Chrysoloras,
Guarino and many
others. A
remarkable role
was played also by
the men involved in
the Council of
Ferrara (1438-39),
where there was a
large circulation of

Greek books and
ideas. About ten
years later,
Giovanni Tortelli,
together with Pope

first steps in
founding the

Research into the
return of the
knowledge of Greek
to Western Europe
has suffered for a
long time from the
lack of intersection
of skills and fields

understand this
phenomenon, one
has to go back a

scholars have demonstrated the crucial role played by the return of knowledge of Greek in the transformation of European culture, both through the translation of texts, and through the direct study of the language. In addition, the actual translations from Greek into Latin remain poorly studied and a clear understanding of the intellectual and cultural contexts that produced them is lacking. In the Middle Ages the knowledge of Greek was limited to isolated areas that had no reciprocal links. As had happened to many Latin authors, all Greek literature was rather

because a number of philosophical texts had already been available in translation from the seventh century AD, or because of a sense of mistrust, due to their ethnic and religious differences. Between the 12th and 14th century AD, a change is perceptible: the sharp decrease in Greek texts and knowledge in the South of Italy, once a reference-point for this kind of study, was perhaps an important reason prompting Italian humanists to go and study Greek in Constantinople. Over the past thirty years it has become evident to scholars that humanism, through the re-appreciation of classical antiquity,

created a bridge to the modern era, which also includes the Middle Ages. The criticism by the humanists of medieval authors did not prevent them from using a number of tools that the Middle Ages had developed or synthesized: glossaries, epitomes, dictionaries, encyclopaedias, translations, commentaries. At present one thing that is missing, however, is a systematic study of the tools used for the study of Greek between the 15th and 16th century; this is truly important, because, in the following centuries, Greek culture provided the basis of

in all the most important fields of knowledge. This volume seeks to supply that gap. Carbon Fibers Aug 21 2019 This book contains eight chapters that discuss the manufacturing methods, surface treatment, composite interfaces, microstructure-property relationships with underlying fundamental physical and mechanical principles, and applications of carbon fibers and their composites. Recently, carbon-based materials have received much attention for their many potential applications. The carbon fibers are

and lightweight, enabling the carbon materials to deliver improved performance in several applications such as aerospace, sports, automotive, wind energy, oil and gas, infrastructure, defense, and semiconductors. However, the use of carbon fibers in cost-sensitive, high-volume industrial applications is limited because of their relatively high costs. However, its production is expected to increase because of its widespread use in high-volume industrial applications; therefore, the methods used for manufacturing carbon fibers and carbon-fiber-reinforced

composites and their structures and characteristics need to be investigated.

The Literary Genres in the Flavian Age Oct 23

2019 The construction of a new Latin library between the end of the Republic and the Augustan Principate was anything but an inhibiting factor. The literary flourishing of the Flavian age shows that awareness of this canon rather stimulated creative tension. In the changing socio-cultural context, daring innovations transform the genres of poetry and prose. This volume, which collects papers by influential scholars of early imperial

Drugs Dec 05 2020
Despite increasing interest in the use of human enhancement drugs (HEDs), our understanding of this phenomenon and the regulatory framework used to address it has lagged behind. Encompassing public health, epidemiology, neuroethics, sport science, criminology, and sociology, this book brings together a broad spectrum of scholarly insights and research expertise from leading authorities to examine key international issues in the field of HEDs. As "traditional" and other "new" drug markets have occupied much of

attention, there has been a lack of scholarly focus on human enhancement drugs. This book provides readers with a much-needed understanding of the illicit drug market of HEDs. The authors, from a variety of cultural contexts, disciplines and perspectives, include both academics and practitioners. Topics explored in this collection amongst others include: • The anti-doping industry and performance and image enhancing drugs • Steroids and gender • The use of cognitive enhancing drugs in academia • The use of sunless synthetic tanning products • The (online) trade of HEDs •

Regulations of the enhancement drugs market This collection will serve as a reference for students, academics, practitioners, law enforcement and others working in this area to reflect on the current state of research and consider future priorities. This detailed exploration will provide a valuable knowledge base for those interested in human enhancement drugs, while also promoting critical discussion.
