**Islamic Social Finance** Jun 16 2019 The current dynamics of world economy show remarkable changes in the socio-economics of credit provision and entrepreneurship. If the emergence of the sharing economy is fostering innovative models of collaborative agency, networking and venture business, economic actors are also looking for a more sustainable development, able to foster profitability as well as community welfare. This book investigates Islamic social finance as a paramount example of this economy under change, where the balance between economic efficiency and social impact is contributing to the transformation of the market from an exchange- to a community-oriented institution. The collected essays analyse the social dimension of entrepreneurship from an Islamic perspective, highlighting the extent to which the rationales of "sharing," distribution and cooperation, affect the conceptualization of the market in Islam as a place of "shared prosperity." Moving from the conceptual "roots" of this paradigm to its operative "branches," the contributing authors also connect the most recent trends in the financial market to Shari'ah-based strategies for community welfare, hence exploring the applications of Islamic social finance from the sharing economy, FinTech and crowdfunding to microcredit, waqf, zakat, sukuk and green investments. An illuminating reference for researchers, practitioners and policy-makers dealing with the challenges of a global market where not only diversity being perceived as a value to be fostered, but also as an important opportunity for a more inclusive economy for everybody.

**OECD Studies on Water Making Blended Finance Work for Water and Sanitation Unlocking Commercial Finance for SDG 6** Sep 12 2021 Investments in water and sanitation are a prerequisite to deliver on the Sustainable Development Goals (SDGs), in particular on SDG 6 ensuring availability and sustainable management of water and sanitation for all. Blended finance can play an important role in strategically investing development finance to mobilise additional commercial finance needed to fill the current investment gaps. Thus far, however, blended finance has not reached scale in the water and sanitation sector. A greater evidence base is needed to better understand the current applications as well as the potential of blended models in the water and sanitation sector. This publication takes a commercial investment perspective and provides insights into three subsectors: (1) water and sanitation utilities, (2) small-scale off-grid sanitation and (3) multi-purpose water infrastructure and landscape-based approaches. The publication draws out recommendations for policy makers and practitioners to apply and scale innovative blended finance approaches where most appropriate.

**Mobilizing climate finance flows** Mar 18 2022 If the Agreement's goal - limit the global temperature increase below 2°C - is to be met, all financial flows need to shift dramatically and rapidly from current investment patterns to 2°C compatible pathways. This study analyses the roles Nordic actors might play in mobilizing finance flows internationally and outlines a roadmap that can guide joint Nordic action during the next five to ten years. While the roadmap covers components of "climate related ODA" and climate compatible contributions from the private sector, the focus of the roadmap lies on the crucial bridging and dialogue that is required between key actors. **Financial Determinants of SME Activity in Developing Countries** Aug 19 2019 PURPOSE: The traditional sources of financing (bank loans) cannot be treated as an essential source of financing for SMEs in developing countries. For this reason, this group of entities uses many alternative sources, from bootstrapping to microfinance and crowdfunding. During the last decade, a significant contribution in this area has been done by financial technology. The purpose of this study is threefold: 1) to present the role of financial technologies in financing SMEs, 2) to examine the role of entities based on financial technology in financing SMEs in developing countries, and 3) to consider other non-bank aspects of financing SMEs, leading to the improvement of the financial situation of these entities. The in-depth analysis of these entrepreneurial finance practices will be developed in the following papers presented in this Issue. METHODOLOGY: This study employs a theoretical approach based on a narrative literature review. The primary attention is focused on applying financial technology as a stimulant for the finance of SMEs in developing countries. FINDINGS: As a consequence of the financing gap for SMEs within the traditional financial system, these entities use non-bank financing based on financial technology. The research confirms that financial technology plays a crucial role in fostering the financial situation of SMEs in developing countries and providing greater financial inclusion for these entities. Both, financial technology and enterprises based on this technology contribute significantly to the improvement of efficiency of financing SMEs in emerging markets. They also provide a broader range of services, than were offered by the traditional financial sector. Regarding the other aspects of SME finance, it is essential to implement such ways of financing like microfinance services and crowdfunding. Such funding mechanisms, together with the budget process and the compliance under the conditions of e-tax systems, are important determinants of current entrepreneurial finance. IMPLICATIONS: The paper describes the financing of SMEs in developing countries. The in-depth picture of the SME's financial situation, focusing on the technological development in this area, provides essential insight into this still poorly explored area. It also offers important premises for shaping the post-pandemic policy to support their further growth. ORIGINALITY/VALUE: Despite growing theoretical and empirical literature about entrepreneurial finance, this study aims to contribute to the role of financial technology in this area. The impact of financial technologies and the role of fintech-based entities on SME activity in developing countries are still poorly researched. Moreover, the research provides a brief overview of other SME funding sources and their determinants in this group of countries.

**United Republic of Tanzania Rapid eTrade Readiness Assessment** Dec 15 2021 With a growing economy, favourable geographic location and rapidly developing innovation ecosystem, Tanzania is well-positioned to integrate into the global digital economy. Economic growth over the last decade has averaged 6 to 7 per cent per year and the medium-term outlook is positive, with growth projected at 6.6 per cent in 2019 and 2020. Large public investment projects and continued foreign direct investment bode well for the future, and there is growing awareness of the benefits of new technologies (as seen by the widespread use of mobile money). Tanzania's economy has also become more diversified over the last decade. While agriculture continues to be the mainstay for the vast majority of the population, emerging sectors such as finance and communications are propelling the economy forward. Export of manufactured goods to regional markets is also growing. Micro, small and medium-sized enterprises (MSMEs) contribute to 27 per cent of the GDP and employ more than 5.2 million people. More than half of the MSMEs are owned by women. As a coastal economy bordering eight countries, six of which are nearly or completely land-locked, Tanzania is well-situated to expand as a regional trade hub. E-commerce has the potential to boost the country's economy by creating new employment opportunities, diversifying sources of income and creating new value chains. For MSMEs in particular, digital technologies provide the potential to improve access to new and existing markets and customers. There is also immense development potential in tourism.

**Financing Solutions to Reduce Natural Gas Flaring and Methane Emissions** Apr 19 2022 Global oil and gas emissions fell to historic lows in 2020 as a result of the decline in global demand associated with the COVID-19 (Coronavirus) pandemic. Data released by the International Energy Agency suggest that CO2 emissions are on the rise as energy demands increase after the pandemic. Whether emissions will rebound to precrisis levels largely depends on governments' emphasis on clean energy transition in their efforts to reboot economic growth. In 2019, direct and indirect emissions from the oil and gas sector represented about 15 percent of the global energy sector's greenhouse gas emissions. More than half of these emissions came from flaring and methane released during oil and gas operations. This book aims to create awareness of the business case for reducing gas flaring and methane emissions. It provides a framework for policy makers to evaluate the feasibility and financial attractiveness of flaring and methane reduction (FMR) projects, analyzes investment barriers, and identifies key variables and success factors, backed by lessons learned from case studies. Simplified financial modeling templates are suggested to help policy makers to assess FMR options. The book focuses on mid-sized flares that collectively represent 58 percent of the global flare volumes. These flares are typically too small to be prioritized by oil companies but still allow for profitable monetization. Smaller FMR projects are unlikely to be economically viable, unless clustered in larger projects or propelled by an enabling and compulsory regulatory framework. Large-scale capture projects require tailored projects, large ancillary infrastructure, government planning, and capital injections costing hundreds of millions of dollars. Although potentially attractive in terms of equity returns to developers, mid-sized flares face various barriers to the financing and execution of FMR solutions. Navigating these barriers requires project developers with specific FMR expertise, as highlighted through six detailed case studies discussed in this book.

**New Perspectives on Supply and Distribution Chain Financing: Case Studies from China and Europe** May 28 2020 Globalization no longer means simply finding low-cost countries for sourcing, but has involved to include the opportunity for growth in Asia's emerging domestic markets, specifically China. This development results in extended, truly global supply chains and thus places a higher pressure on working capital. Therefore, several definitions of Supply Chain Management already encompass financial aspects and demand a more integrated consideration of material, information, and financial flows within supply chains. However, more precise theory on "Supply Chain Financing" is understudied and initial implementation of related solutions in industry has only gained momentum during and after the economic and financial crises of 2008 and 2009. In contrast to traditional financial instruments for supply chains - for instance trade finance products which have been around for more than a century - Supply Chain Financing leverages larger and influential members of supply chains. These firms might, for instance, provide easier and cheaper access to financing for smaller supply chain members supporting their profitability through renegotiated and reduced purchasing prices. Echoing recent research results on supply chain risk management, other firms may prefer to take on a supply chain perspective and work on creating agile and resilient supply chains. In this context, Supply Chain Financing can be employed to ensure liquidity for crucial upstream and downstream supply chain partners thereby allowing a firm to effectively control risk while making the most of remaining growth opportunities in emerging markets like China!

**Procurement Finance** Nov 14 2021 This book presents a business model on how to structure the relationship between financial services and procurement. The need for new models is particularly important to support small and medium enterprises (SMEs) where there is an evident difficulty in accessing credit. Due to this context, innovative solutions must be introduced. The objective of this book is to determine how innovation can support the dynamic and volatile international context and the increasingly relevant function of procurement. It is becoming more and more important to take into account complex international transactions with notably long payment terms. Organizations need to manage the best way to handle the financial relationships and the risks related to credit provision and payments. This book presents an end-to-end support to procurement, including trade finance, supply chain finance, and related payments. In addition, the enterprises need to keep sufficient liquidity levels in the short and medium term. This is a constant challenge today, with the turbulence of financial markets and a continuing climate of economic uncertainty making it harder to obtain external funding. Businesses need to optimize the working capital. This can be done through the innovative concept of procurement finance, which allows SMEs to benefit by the new vision of collaborative procurement. This book provides several practical examples of advanced procurement finance solutions. It demonstrates how the use of process improvement and technology can help in overcoming the current financially difficult situation. In addition, based on the business model presented, the integrated approach to procurement finance allows sustainable solutions which will be of interest to academics, researchers, managers, and practitioners in both buyer and vendor companies, as well as in banks and other financial institutions.

**Supply Chain Finance Solutions** May 20 2022 The book "Supply Chain Finance Solutions" offers orientation in the new discipline of Supply Chain Finance (SCF) by investigating the need for and nature of SCF, along with its characteristics and enablers. Due to the novelty of the Supply Chain Finance approach, there are still many knowledge gaps. This lack of research leads to uncertainties about the successful implementation of SCF solutions within companies as there is little quantified evidence on the achievable cost savings and other potential benefits. The authors close this gap by providing the latest information on business concepts and the SCF market. Based on a sample SCF model, the worldwide market size for such solutions and potential cost savings to companies engaged in SCF are analyzed. The work underlines the generally agreed-upon attractiveness and future relevance of SCF solutions by creating win-win situations; for all actors in the end-to-end supply chain as well as for external service providers.

**The Love Triangle** Jul 30 2020 What makes marriage work? The answer appears to be hidden from countless couples that find it impossible to keep their covenant of love. Today, one out of every two marriages in America ends in divorce, and the state of the family is in crisis. The rebuilding of the foundational structure of our nation is absolutely essential, and it must begin within the home. The Love Triangle exposes God's design for marriage as detailed in Ephesians 5:22-33. Husbands learn what it means to love their wives as Christ loved the Church, and wives understand the importance of submission. To know God's Word on the subject of marriage is one matter; to live it necessitates the following warning: "Do not miss the symbolism of the wedding ceremony taking place at the altar. Something is about to be sacrificed." The Love Triangle explores obstacles in society, self and the spiritual realm that prevent a couple's intimacy with God and with one another. To stand firm in the face of those challenges is to fulfill the call of God that is specific for the married: "Be fruitful and increase in number; fill the earth and subdue it" (Genesis 1:28a). It is time for marriages to find healing, unity and this God-defined purpose. Renee Beamer, founder of Sharing Love and Truth Ministry, writes from her more than 20 years experience of wedded bliss and includes stories from others who also remain strong in their marriages despite the storms of the past. In each account of their struggles to remain faithful, the conclusion leads directly to the heart of God. The Father's desire to be known more intimately and His presence enjoyed more fully is beautifully portrayed in the unfolding of a "profound mystery" in marriage.
