The Business Model: How to Develop New Products, Create Market Value and Make the Competition Irrelevant Sep 03 2020 New product success is often attributed to intuition. Yet, while some products born from intuition do make it big, many others crash and burn. The reason is that intuition is only one

This book offers a systematic approach to identifying market opportunities and developing breakthrough business models. It outlines the key principles of business model generation, presents a value-based framework for developing viable new offerings, and provides a set of practical tools for creating a meaningful value proposition that drives market success. The business model framework outlined in this book applies to a wide range of companies—startups and established enterprises, consumer-packaged-goods companies and business-to-business enterprises, high-tech and low-tech ventures, online and brick-and-mortar entities, product manufacturers and value-added service providers, nonprofit organizations and profit-driven companies. Practical, actionable, and succinct, The Business Model is the essential reference and how-to guide for everyone seeking to achieve market success: from entrepreneurs to experienced managers, from senior executives to product designers, from those creating new market offerings to those improving on existing ones. High-temperature Liquid Chromatography Jun 19 2019 High-temperature liquid chromatography has

attracted much interest in recent years but has not yet recognized its full potential in the chromatographic community. There is a widespread reluctance in industry to use temperature to speed up the separation process, influence the selectivity of a separation or implement novel detection techniques. However, the technology has now matured and could revolutionize chromatography as we see it today. Better equipment, such as heating systems able to generate faster heating rates, is becoming more readily available. Also, columns based on silica gel, which can withstand higher temperatures for an extended period, are now being introduced. Nevertheless, further technological and methodical efforts are needed to establish the method in a regulated environment like the pharmaceutical industry. This is the only text to cover all the practical aspects, as well as the underlying theoretical principles, of setting up an HPLC system for high temperature operation. It is not intended solely for academics but will also benefit the researcher interested in more practical considerations. The author is a recognized expert and has conducted several studies with partners from industry to validate the method. Many real examples from these studies have been included in the book. The aim is to support practitioners in the creation of their own protocols without the need to rely solely on trial and error. The book starts with a brief definition of high temperature liquid chromatography before going on to cover: system set up; the heating system; mobile phase considerations; suitable stationary phases; method development using temperature programming; analyte stability, and special hyphenation techniques using superheated water as a mobile phase. In each chapter, experimental data is used to illustrate the main statements and the advantages over conventional HPLC are evaluated. The book concludes with a critical outlook on further developments and applications underlining the necessary advances needed to make high temperature HPLC more robust.

New Hope for Schools Dec 18 2021 After teaching more than twenty years in Los Angeles public schools, author Dr. Susan Farr Gabriele became disheartened with the state of schools. Too many influences took her away from the actual teaching of children. Gabriele turned to graduate school to seek answers to the problems in public education. In New Hope for Schools, she shares the results of her studies and the creation of a system that works for education. Gabriele discusses her experiences as a teacher and teacher turned detective looking for answers in her teaching experience and

postcareer graduate school. She then reveals a breakthrough theory to demystify the behavior of people in schools, gleaned out of Boulding's Typology of System Complexity. As a result, she created the RoundTable, a practice designed to be an effective new tool for schools and classrooms, as well as a seed for systemic renewal. She also provides a three-pronged solution for unshackling and revitalizing schools and workplaces. New Hope for Schools presents new theory, new practice, and a user-friendly solution for systemic school renewal. It offers compelling new insights and solutions for all school decision makers-from educators, to parents, students, educational scholars, researchers, and policy makers. "A powerful way to learn ...the RoundTable provides a kind of learning experience that makes a real contribution to the community as a whole..." -SUSAN McCORMICK, Polson School District Superintendent, Polson, Montana; School Improvement Consultant, Montana Office of Public Instruction, Helena, Montana
