Routledge Handbook of Planning and Management of Global Strategic Infrastructure Projects Aug 25 2022 This book examines complex challenges in managing major strategic economic and social infrastructure projects. It is divided into four primary themes: value-based approach to infrastructure systems appraisal, enabling planning and execution, financing and contracting strategies for infrastructure systems and digitising major infrastructure delivery. Within these four themes, the chapters of the book cover: the value and benefits of infrastructure projects planning for resilient major infrastructure projects sustainable major infrastructure development and management, including during mega events improving infrastructure project financing stakeholder engagement and multi-partner collaborations delivering major infrastructure projects effectively and efficiently whole-life-cycle performance, operations and maintenance relationship risks on major infrastructure projects public-private partnerships, design thinking principles, and innovation and technology. By drawing on insights from their research, the editors and contributors bring a fresh perspective to the transformation of major strategic infrastructure projects. This text is designed to help policymakers and investors select and prioritise their infrastructure needs beyond the constraining logic of political cycles. It offers a practical set of recommendations for governments on attracting private capital for infrastructure projects while creating clear social and economic value for their citizens. Through theoretical underpinning, empirical data and in-depth informative global case studies, the book presents an essential resource for students, researchers, practitioners and policymakers interested in all aspects of strategic infrastructure planning, project management, construction management, engineering and business management.

The Politics of Acknowledgement Sep 26 2022 Human rights violations leave deep scars on people, societies, and nations. Rights groups argue that resolving past violence is necessary for a peaceful future. But how can nations ensure that instruments of transitional justice are the best path to reconciliation? This book develops a theoretical framework a framework of acknowledgement to evaluate truth commissions. Analysis of the difficulties encountered and the ultimate failure of truth commissions in Uganda and Haiti reveals that acknowledgement of past violence by both victims and perpetrators must come before goals such as forgiveness and social cohesion if reconciliation is to be achieved.

Integrated Cost and Schedule Control for Construction Projects Apr 21 2022 Management and administrative processes within the construction industry have been undergoing major changes in the last several decades. These changes have involved significant adjustments in management science and management techniques, brought about by the need for contemporary valid information with which to manage the construction process. In short, management in the construction industry is changing significantly; change will continue at an accelerated pace at least through the next decade. The responses required of construction industry management are now resulting in a movement away from an

entrepreneurial management style to professional management techniques and procedures. THE COMPELLING ECONOMIC ISSUES The issues forcing these changes are economic. The rising costs of construction and of money are forcing the buyers of construction services to be more demanding. Their demands are for more construction economies, more production, and more productivity than at any time in the past. Nowhere has this been more evident than in the Business Roundtable on construction and in the response of the construction industry to it. To be successfully responsive, management in the construction industry will be required to use the best project management methods available for cost control, schedule control, and for financial and accounting controls. But responsive professional management can survive and will flourish within this more demanding economic environment.

Das bleibt künftig so. Mit dem Jahrgang 2014 verändert sich das Jahrbuch aber in mehrfacher Hinsicht: Das Jahrbuch erscheint mit der Ausgabe 2014 im Open Access. Jeder Band setzt einen thematischen Schwerpunkt. Das Forum bietet Platz für geschichtswissenschaftliche Reflexionen und Debatten. Jeder Beitrag des Jahrbuchs durchläuft ein strenges Peer-Review-Verfahren. Das Jahrbuch erweitert seinen Namen zum „Jahrbuch für Europäische Geschichte. European History Yearbook“. und druckt künftig deutsch- und englischsprachige Beiträge, seit 2015 ausschließlich englischsprachige.

Engineering and Managing Software Requirements Aug 01 2020 Requirements engineering is the process by which the requirements for software systems are gathered, analyzed, documented, and managed throughout their complete lifecycle. Traditionally it has been concerned with technical goals for, functions of, and constraints on software systems. Aurum and Wohlin, however, argue that it is no longer appropriate for software systems professionals to focus only on functional and non-functional aspects of the intended system and to somehow assume that organizational context and needs are outside their remit. Instead, they call for a broader perspective in order to gain a better understanding of the interdependencies between enterprise stakeholders, processes, and software systems, which would in turn give rise to more appropriate techniques and higher-quality systems. Following an introductory chapter that provides an exploration of key issues in requirements engineering, the book is organized in three parts. Part 1 presents surveys of state-of-the-art requirements engineering process research along with critical assessments of existing models, frameworks and techniques. Part 2 addresses key areas in requirements engineering, such as market-driven requirements engineering, goal modeling, requirements ambiguity, and others. Part 3 concludes the book with articles that present empirical evidence and experiences from practices in industrial projects. Its broader perspective gives this book its distinct appeal and makes it of interest to both researchers and practitioners, not only in software engineering but also in other disciplines such as business process engineering and management science.

Drawdown Jun 11 2021 NEW YORK TIMES BESTSELLER For the first time ever, an international coalition of leading researchers, scientists and policymakers has come together to offer a set of realistic and bold solutions to climate change. All of the techniques described here - some well-known, some you may have never heard of - are economically viable, and communities throughout the world are already enacting them. From revolutionizing how we produce and consume food to educating girls in lower-income countries, these are all solutions which, if deployed collectively on a global scale over the next thirty years, could not just slow the earth's warming, but reach drawdown: the point when greenhouse gasses in the atmosphere peak and begin to decline. So what are we waiting for?

Group Residences for Older Adults Dec 05 2020 This important book describes a unique new procedure for evaluating how elderly persons living in nursing homes, residential care facilities, and senior apartments are affected by their environments. By reporting results from a comprehensive appraisal of group residential settings throughout the United States, the authors describe ways in which settings for older adults vary in their resident and staff characteristics, physical resources, policies and services, and social climates. They also show how resources are currently allocated to older people based on their social status and functional abilities, how facility size and ownership affect resource availability, and how setting characteristics may impact residents' lives. The book will be of particular interest to gerontological researchers and practitioners, community psychologists, and social service professionals who will find practical suggestions, based on empirical data, for improving existing residential settings and for planning new ones.

Electric Vehicle Integration in a Smart Microgrid Environment Jan 06 2021 Electric Vehicle Integration in a Smart Microgrid Environment The growing demand for energy in today's world, especially in the Middle East and Southeast Asia, has been met with massive exploitation of fossil fuels, resulting in an increase in environmental pollutants. In order to mitigate the issues arising from conventional internal combustion engine-powered vehicles, there has been a considerable acceleration in the adoption of electric vehicles (EVs). Research has shown that the impact of fossil fuel use in transportation and surging demand in power owing to the growing EV charging infrastructure can potentially be minimized by smart microgrids. As EVs find wider acceptance with major advancements in high efficiency drivetrain and vehicle design, it has become clear that there is a need for a system-level understanding of energy storage and management in a microgrid environment. Practical issues, such as fleet management, coordinated operation, repurposing of batteries, and environmental impact of recycling and disposal, need to be carefully studied in the context of an ageing grid infrastructure. This book explores such a perspective with contributions from leading experts on planning, analysis, optimization, and management of electrified transportation and the transportation infrastructure. The primary purpose of this book is to capture state-of-the-art development in smart microgrid management with EV integration and their applications. It also aims to identify potential research directions and technologies that will facilitate insight generation in various domains, from smart homes to smart cities, and within industry, business, and consumer applications. We expect the book to serve as a reference for a larger audience, including power system architects, practitioners, developers, new researchers, and graduate-level students, especially for emerging clean energy and transportation electrification sectors in the Middle East and Southeast Asia.
