Strong Brands, Strong Relationships Mar 29 2020 From the editor team of the ground-breaking *Consumer-Brand Relationships: Theory and Practice* comes this new volume. *Strong Brands, Strong Relationships* is a collection of innovative research and management insights that build upon the foundations of the first book, but takes the study of brand relationships outside of traditional realms by applying new theoretical frameworks and considering new contexts. The result is an expanded and better-informed account of people's relationships with brands and a demonstration of the important and timely implications of this evolving sub-discipline. A range of different brand relationship environments are explored in the collection, including: online digital spaces, consumer collectives, global brands, luxury brands, branding in terrorist organizations, and the brand relationships of men and transient consumers. This book attends to relationship endings as well as their beginnings, providing a full life-cycle perspective. While the first volume focused on positive relationship benefits, this collection explores dysfunctional dynamics, adversarial and politically-charged relationships, and those that are harmful to well-being. Evocative constructs are leveraged, including secrets, betrayals, anthropomorphism, lying, infidelity, retaliation, and bereavement. The curated collection provides both a deeper theoretical understanding of brand relationship phenomena and ideas for practical application from experiments and execution in commercial practice. *Strong Brands, Strong Relationships* will be the perfect read for marketing faculty and graduate students interested in branding dynamics, as well as managers responsible for stewarding brands.

Automating Crime Prevention, Surveillance, and Military Operations Dec 26 2019 This interdisciplinary volume critically explores how the ever-increasing use of automated systems is changing policing, criminal justice systems, and military operations at the national and international level. The book examines the ways in which automated systems are beneficial to society, while addressing the risks they represent for human rights. This book starts with a historical overview of how different types of knowledge have transformed crime control and the security domain, comparing those epistemological shifts with the current shift caused by knowledge produced with high-tech information technology tools such as big data analytics, machine learning, and artificial intelligence. The first part explores the use of automated systems, such as predictive policing and platform policing, in law enforcement. The second part analyzes the use of automated systems, such as algorithms used in sentencing and parole decisions, in courts of law. The third part examines the use and misuse of automated systems for surveillance and social control. The fourth part discusses the use of lethal (semi)autonomous weapons systems in armed conflicts. An essential read for researchers, politicians, and advocates interested in the use and potential misuse of automated systems in crime control, this diverse volume draws expertise from such fields as criminology, law, sociology, philosophy, and

anthropology.

SBIR at the Department of Defense Sep 03 2020 Created in 1982 through the Small Business Innovation Development Act, the Small Business Innovation Research (SBIR) program remains the nation's single largest innovation program for small business. The SBIR program offers competitive awards to support the development and commercialization of innovative technologies by small private-sector businesses. At the same time, the program provides government agencies with technical and scientific solutions that address their different missions. SBIR at the Department of Defense considers ways that the Department of Defense SBIR program could work better in addressing the congressional objectives for the SBIR program to stimulate technological innovation, use small businesses to meet federal research and development (R & D) needs, foster and encourage the participation of socially and economically disadvantaged small businesses, and increase the private sector commercialization of innovations derived from federal R&D. An earlier report, *An Assessment of the Small Business Innovation Research Program at the Department of Defense*, studied how the SBIR program has stimulated technological innovation and used small businesses to meet federal research and development needs. This report builds on the previous one, with a revised survey of SBIR companies. SBIR at the Department of Defense revisits some case studies from the 2009 study and develops new ones, and interviews agency managers and other stakeholders to provide a second snapshot of the program's progress toward achieving its legislative goals.

Grow Apr 10 2021 Ten years of research uncover the secret source of growth and profit ... Those who center their business on improving people's lives have a growth rate triple that of competitors and outperform the market by a huge margin. They dominate their categories, create new categories and maximize profit in the long term. Pulling from a unique ten year growth study involving 50,000 brands, Jim Stengel shows how the world's 50 best businesses—as diverse as Method, Red Bull, Lindt, Petrobras, Samsung, Discovery Communications, Visa, Zappos, and Innocent—have a cause and effect relationship between financial performance and their ability to connect with fundamental human emotions, hopes, values and greater purposes. In fact, over the 2000s an investment in these companies—"The Stengel 50"—would have been 400 percent more profitable than an investment in the S&P 500. Grow is based on unprecedented empirical research, inspired (when Stengel was Global Marketing Officer of Procter & Gamble) by a study of companies growing faster than P&G. After leaving P&G in 2008, Stengel designed a new study, in collaboration with global research firm Millward Brown Optimor. This study tracked the connection over a ten year period between financial performance and customer engagement, loyalty and advocacy. Then, in a further investigation of what goes on in the "black box" of the consumer's mind, Stengel and his team tapped into neuroscience research to look at customer engagement and measure subconscious attitudes to determine whether the top businesses in the Stengel Study were more associated with higher ideals than were others. Grow thus deftly blends timeless truths about human behavior and values into an action framework - how you discover, build, communicate, deliver and evaluate your ideal. Through colorful stories drawn from his fascinating personal experiences and "deep dives" that bring out the true reasons for such successes as the Pampers, HP, Discovery Channel, Jack Daniels and Zappos, Grow unlocks the code for twenty-first century business success.

Eccentric Orbits Jun 19 2019 In the early 1990s, Motorola, the legendary American company, made a huge gamble on a revolutionary satellite telephone system called Iridium. Light-years ahead of anything previously put into space, and built on technology developed for Ronald Reagan's 'Star Wars,' Iridium's constellation of sixty-six satellites in six evenly spaced orbital planes meant that at least one satellite was always overhead. Iridium was a mind-boggling technical accomplishment, surely the future of communication. The only problem was that Iridium was also a commercial disaster. Only months after launching service, it was \$11 billion in debt, burning through \$100 million a month and bringing in almost no revenue. Bankruptcy was inevitable - the largest to that point in American

history. It looked like Iridium would go down as just a 'science experiment.' That is, until Dan Colussy got a wild idea. Colussy, a former CEO of Pan Am, heard about Motorola's plans to 'de-orbit' the system and decided he would buy Iridium and somehow turn around one of the biggest blunders in the history of business. *Eccentric Orbits* masterfully traces the birth of Iridium and Colussy's tireless efforts to stop it from being destroyed, from meetings with his motley investor group, to the Clinton White House, to the Pentagon, to the hunt for customers in special ops, shipping, aviation, mining, search and rescue. Impeccably researched and wonderfully told, *Eccentric Orbits* is a rollicking, unforgettable tale of technological achievement, business failure, the military-industrial complex and one of the greatest deals of all time.

Procurement Finance Jan 07 2021 This book presents a business model on how to structure the relationship between financial services and procurement. The need for new models is particularly important to support small and medium enterprises (SMEs) where there is an evident difficulty in accessing credit. Due to this context, innovative solutions must be introduced. The objective of this book is to determine how innovation can support the dynamic and volatile international context and the increasingly relevant function of procurement. It is becoming more and more important to take into account complex international transactions with notably long payment terms. Organizations need to manage the best way to handle the financial relationships and the risks related to credit provision and payments. This book presents an end-to-end support to procurement, including trade finance, supply chain finance, and related payments. In addition, the enterprises need to keep sufficient liquidity levels in the short and medium term. This is a constant challenge today, with the turbulence of financial markets and a continuing climate of economic uncertainty making it harder to obtain external funding. Businesses need to optimize the working capital. This can be done through the innovative concept of procurement finance, which allows SMEs to benefit by the new vision of collaborative procurement. This book provides several practical examples of advanced procurement finance solutions. It demonstrates how the use of process improvement and technology can help in overcoming the current financially difficult situation. In addition, based on the business model presented, the integrated approach to procurement finance allows sustainable solutions which will be of interest to academics, researchers, managers, and practitioners in both buyer and vendor companies, as well as in banks and other financial institutions.

SBIR at the National Science Foundation Aug 02 2020 The Small Business Innovation Research (SBIR) program is one of the largest examples of U.S. public-private partnerships, and was established in 1982 to encourage small businesses to develop new processes and products and to provide quality research in support of the U.S. government's many missions. The U.S. Congress tasked the National Research Council with undertaking a comprehensive study of how the SBIR program has stimulated technological innovation and used small businesses to meet federal research and development needs, and with recommending further improvements to the program. In the first round of this study, an ad hoc committee prepared a series of reports from 2004 to 2009 on the SBIR program at the five agencies responsible for 96 percent of the program's operations-including the National Science Foundation (NSF). Building on the outcomes from the first round, this second round presents the committee's second review of the NSF SBIR program's operations. Public-private partnerships like SBIR are particularly important since today's knowledge economy is driven in large part by the nation's capacity to innovate. One of the defining features of the U.S. economy is a high level of entrepreneurial activity. Entrepreneurs in the United States see opportunities and are willing and able to assume risk to bring new welfare-enhancing, wealth-generating technologies to the market. Yet, although discoveries in areas such as genomics, bioinformatics, and nanotechnology present new opportunities, converting these discoveries into innovations for the market involves substantial challenges. The American capacity for innovation can be strengthened by addressing the challenges faced by entrepreneurs.

Thank You IBM! Next Edition Aug 22 2019 I began to write this book over twenty years ago. My purpose was to tell the true story about how IBM made too many companies successful by standing down rather than competing. As a Senior IBM Systems Engineer, I saw it all happen. The \$ Trillion dollar PC marketplace is the biggest example of IBM's major losses. Yet, the PC was just one of many industry sub-segments over the years in which IBM failed miserably. We need more than ten fingers to count them all. This book tells all the great stories about how industries came into being and entrepreneurs often in their early twenties became billionaires. This book tells you which companies did the best; which regular guys became industry moguls; and who has the money today. Among other things, it tells us all who owes IBM the biggest thank you's. This book in many ways is about Big Blue's misgivings about being too successful in too many IT product areas. IBM Executives over the years from the CEO on down were all paid very well to manage all aspects of the company's business. Unfortunately each and every CEO after the Watsons and T. Vincent Learson, focused on just one aspect of IBM - its mainframe business. So the IBM Chieftains lost just about every other opportunity including the PC. They simply handed very crafty "entrepreneurs," the whole game. IBM created many industry billionaires simply by not watching its assets. Microsoft alone has four documented billionaires on its list which is topped by Bill Gates, the richest man in the world at \$102 billion. Additionally, there are over 12,000 other Microsoft employees on the millionaire's list. IBM paid for all of the zillionaires. In Chapter 1, I show each and every billionaire and a number of millionaires. I then go on in sixty-nine chapters to tell you the essence of the full Microsoft / IBM story along with many other stories of IBM squandering many other real business opportunities. These are enjoyable to read but hard to believe. You are going to love this book, designed by an IBM insider and told with respect for IBM and with the truth that all of these great stories deserve. You will not want to put this book down. Kelly not only gives the facts about the new billionaires; he also provides a history lesson about the entire industry that will capture your imagination. You'll learn how all these billionaires got their money. The book begins with the introduction of the first computer and it takes you on a ride through all of the major events that occurred during each IBM CEO's tenure. The story thus begins with Thomas Watson Sr, as CEO and continues chapter by chapter to the state of the computer industry today. Kelly does it all in 69 easy-to-read enjoyable chapters. Few books are must-read but Thank You IBM! will quickly be at the top of your list and America's most read list.

China and Global Value Chains Feb 26 2020 President Trump has raised the intriguing question of bringing the manufacturing of companies like Apple back from China to the U.S. This book, however, argues that in this age of the knowledge-based economy and increased globalization, that value creation and distribution based on knowledge and innovation activities are at the core of economic development. The double-edged sword of globalization has transformed China's economic development in the past few decades. Although China has benefitted from globalization and is now the second largest economy in the world, having become a global manufacturing power and the biggest exporter of high-tech products, it continues to be highly dependent on foreign sources of capital and technology. This book will explore the core of the Chinese economy from the perspective of the Global Value Chain (GVC), combining analysis of inward investment, international trade, Science and Technology and Innovation (S&TI) and economic development. Specifically, it investigates China's evolving role in GVCs with some innovative Chinese companies emerging in the global market and China's ongoing efforts to become an innovation-driven economy. China's impressive economic record and experience provides an impressive role model for other developing countries.

Inventors at Work Jul 21 2019 *Inventors at Work: The Minds and Motivation Behind Modern Inventions* is a collection of interviews with inventors of famous products, innovations, and technologies that have made life easier or even changed the way we live. All of these scientists, engineers, wild-eyed geniuses, and amateur technologists have dedicated their lives to the pursuit of that singular Eureka! moment in their laboratories or garages. Each has altered the modern world as we know it in some significant way. The conversations will show budding tinkerers, professional inventors, educators, and onlookers how the top minds in the field come up with ideas and manage the first steps of inspiration, how they experiment productively, how they "sell" ideas to others and secure funding, how they execute the final product, and how they commercialize and protect their work. All inventors will learn from these conversations, whether they are exploring new chemical compounds in million-dollar labs or perfecting a household gadget or toy in a basement workshop. Author Brett Stern, an inventor himself, explores with each inventor the nature of creativity and intuition, the skill set needed, and the force, motivation, or desire that must be summoned to spend endless hours searching for an answer to a question that no one else has asked or solving a problem most think has no solution. The book is required reading for all technical and creative individuals to better understand the innovation process and the logistics of following through on an idea that has the potential to change society. This book offers: Interviews with inventors of world-changing products and technologies An outline of the steps required in the creative/inventing process whether the goal is a civilization-changing process or a device meant to impress friends and family and perhaps earn license fees. An instructive overview of how to solve problems in innovation—and how to use failures as stepping stones to successful inventions

Unleashing the Innovators Mar 09 2021 Today's established companies must find new ways to reignite their entrepreneurial DNA and jumpstart revenues—or risk losing their way. By working with startup companies, Jim Stengel, renowned consultant to Fortune 500 companies and the former global marketing officer for Procter & Gamble, says that legacy companies can renew themselves: by acquiring new technology and creating new business lines; relearning the need for speed; sparking innovation; and learning from failures. At P&G, Stengel saw the importance of establishing partnerships with the startup world in order to learn how to better innovate. Relying on extensive interviews with innovation leaders at enterprise companies and startups, Stengel's *Unleashing the Innovators* takes readers inside such storied companies as GE and Wells Fargo, IBM and Target, Motorola Solutions and Toyota to see what they are learning from their alliances with entrepreneurs. Stengel also explores how even 20- and 30-year-old "startups" like Amazon, Google, and Facebook can reinvent themselves—and what managers at legacy companies everywhere can learn from them. Drawing on a specially commissioned global study of over 200 established corporations and startups, conducted by research consultancy OgilvyRED, Stengel found that companies with successful startup partnerships are three times more likely to change their culture to be more innovative. Filled with in-depth stories from the front lines of today's most forward-looking companies, *Unleashing the Innovators* shows how companies of all sizes can better navigate today's changing landscape, accelerate innovation, increase revenues, and improve their customer relationships.

Cutting the Cord Sep 15 2021 One of Time Magazine's Top 100 Inventors in History shares an insider's story of the cellphone, how it changed the world—and a view of where it's headed. While at Motorola in the 1970s, wireless communications pioneer Martin Cooper invented the first handheld mobile phone. But the cellphone as we know it today almost didn't happen. Now, in *Cutting the Cord*, Cooper takes readers inside the stunning breakthroughs, devastating failures, and political battles in the quest to revolutionize—and control—how people communicate. It's a dramatic tale involving brilliant engineers, government regulators, lobbyists, police, quartz crystals, and a horse. Industry skirmishes sparked a political war in Washington to prevent a monopolistic company from dominating telecommunications. The drama culminated in the first-ever public call made on a handheld, portable telephone—by Cooper himself. The story of the cell phone has much to teach about innovation, strategy, and management. But the story of wireless communications is far from finished. This book also relates Cooper's vision of the future. From the way we work and the way children learn to the ways we approach medicine and healthcare, advances in the cellphone will continue to reshape our world for the better.

Building the Illinois Innovation Economy Nov 17 2021 Responding to the challenges of fostering regional growth and employment in an increasingly competitive global economy, many U.S. states and regions have developed programs to attract and grow companies as well as attract the talent and resources necessary to develop innovation clusters. These state and regionally based initiatives have a broad range of goals and increasingly include significant resources, often with a sector focus and often in partnership with foundations and universities. These are being joined by recent initiatives to coordinate and concentrate investments from a variety of federal agencies that provide significant resources to develop regional centers of innovation, business incubators, and other strategies to encourage entrepreneurship and high-tech development. *Building the Illinois Innovation Economy* is a study of selected state and regional programs to identify best practices with regard to their goals, structures, instruments, modes of operation, synergies across private and public programs, funding mechanisms and levels, and evaluation efforts. This report reviews selected state and regional efforts to capitalize on federal and state investments in areas of critical national needs. This review includes both efforts to strengthen existing industries as well as specific new technology focus areas such as nanotechnology, stem cells, and energy in order to improve our understanding of program goals, challenges, and accomplishments. As a part of this review, The Committee on Competing in the 21st Century: Best Practice in State and Regional Innovation Initiatives is convening a series of public workshops and symposia involving responsible local, state, and federal officials and other stakeholders. These meetings and symposia will enable an exchange of views, information, experience, and analysis to identify best practice in the range of programs and incentives adopted. *Building the Illinois Innovation Economy* summarizes discussions at these symposia, fact-finding meetings, and commissioned analyses of existing state and regional programs and technology focus areas, the committee will subsequently produce a final report with findings and recommendations focused on lessons, issues, and opportunities for complementary U.S. policies created by these state and regional initiatives.
