EBOOK: Starting from the Child: Teaching and Learning in the Foundation Stage May 28 2020 Starting from the Child supports early years practitioners to be advocates for young children and their learning needs. In the fourth edition of this highly influential and inspirational book, Julie Fisher outlines the important theories and research which should underpin best early years practice. She takes a robust and principled stand against downward pressure to formalise young children's learning too soon, and offers practical and meaningful ways to develop high quality learning and teaching in the early years. Starting from the Child challenges all early years practitioners to consider: How to build on children's innate desire to learn and their competence and autonomy as effective early learners How to plan environments indoors and out that make learning irresistible How to plan for high quality child-initiated learning to take place seamlessly alongside learning that is adult-initiated The role of the adult in supporting and extending young children's learning How daily observation of children informs and underpins planning for their individual and unique learning needs Revised and updated throughout, this fourth edition includes the latest research on early brain development and reference to recent government initiatives including the revised Early Years Foundation Stage. Starting from the Child is essential reading, not only for early years practitioners, but for all those who manage and make decisions about early learning. "In the fourth edition of this book, Julie Fisher once again demonstrates a comprehensive understanding of the history of early childhood education, and the enduring principles that continue to underpin practice. She has skilfully blended these principles with contemporary research and theory in order to provide readers with deep understanding of young children as capable, competent and eager learners. Julie draws on her extensive work with practitioners to present the everyday realities and complexities of their practice, and to sound welcome notes of caution about the ways in which policy frameworks are used. She offers vignettes to illustrate key issues, provocations and challenges to stimulate thinking, and questions to engage readers with contemporary issues and dilemmas. The book also reflects deeply held convictions about the moral and ethical responsibilities we have to teach young children in ways that respect their extraordinary enthusiasm for learning. This book will be invaluable for students of early childhood education, especially those on professional development programmes such as Early Childhood Studies, Early Years Professional Status, and Post Graduate Certificate of Education." Professor Elizabeth Wood, University of Sheffield, UK "The fourth edition of this classic text has been updated with recent research. This is very helpful in supporting readers but it's the underpinning philosophy that makes this a continuing classic. The title says it all. Julie takes the reader by the hand and says 'Look and listen, give these children your full and respectful attention and they will teach you how to be with them.' All the practical ideas in the book support practitioners in using their skills and knowledge to recognise early childhood as valuable in its own right - to be relished and enjoyed, not to be rushed through or seen merely as preparation for the next stage. We owe it to our children to take heed." Helen Moylett, Early Years Consultant and writer "Julie Fisher's work has been a staple of Early Childhood Education since the first edition of Starting from the Child in 1996. Her fourth edition does not disappoint, and is a welcome development of her thinking. She delves in more detail, for example, into brain development, and leads her readers further into the latest scientific thinking on how children learn. She is, as ever, insightful about how adults work with children, with helpful advice about how to observe (and record) children's learning, and how to plan effectively. Her inclusion of her own latest field work ensures that Julie's advice on early years practice remains rooted in the everyday, while making accessible a range of theoretical and scientific perspectives. This is a book for students, teachers and other early years workers seeking to find their way through the conflicting needs of a rapidly changing area of work." Nick Swarbrick, Programme Lead for the Undergraduate Modular Programme in the School of Education, Oxford Brookes University, UK

Science Teachers' Learning Jun 28 2020 Currently, many states are adopting the Next Generation Science Standards (NGSS) or are revising their own state standards in ways that reflect the NGSS. For students

and schools, the implementation of any science standards rests with teachers. For those teachers, an evolving understanding about how best to teach science represents a significant transition in the way science is currently taught in most classrooms and it will require most science teachers to change how they teach. That change will require learning opportunities for teachers that reinforce and expand their knowledge of the major ideas and concepts in science, their familiarity with a range of instructional strategies, and the skills to implement those strategies in the classroom. Providing these kinds of learning opportunities in turn will require profound changes to current approaches to supporting teachers' learning across their careers, from their initial training to continuing professional development. A teacher's capability to improve students' scientific understanding is heavily influenced by the school and district in which they work, the community in which the school is located, and the larger professional communities to which they belong. Science Teachers' Learning provides guidance for schools and districts on how best to support teachers' learning and how to implement successful programs for professional development. This report makes actionable recommendations for science teachers' learning that take a broad view of what is known about science education, how and when teachers learn, and education policies that directly and indirectly shape what teachers are able to learn and teach. The challenge of developing the expertise teachers need to implement the NGSS presents an opportunity to rethink professional learning for science teachers. Science Teachers' Learning will be a valuable resource for classrooms, departments, schools, districts, and professional organizations as they move to new ways to teach science.

Learning to Write as a Hostile Act for Latino Students Dec 03 2020 Cultural differences play a part in communication breakdowns between students and teachers, and only a complete understanding of the model that English instructors use when teaching writing gives us an insight into the reasons why. This book observes and analyzes the communication patterns of Latino students in an English course at the college level, closely observing the interaction between Latino students and the teacher, as well as between Latino students and other student groups in the class. Learning to Write as a Hostile Act for Latino Students concludes that cultural differences - and the resulting miscommunications - significantly contribute to the negative impressions Latino students have about the writing process and English courses. Understanding these differences is crucial to improving the teaching of writing to Latino and other minority students.
